

Part E: Monitoring

18.0 Monitoring

In order to measure the effectiveness of speed limits it is important that monitoring is undertaken at all sites where changes have been made. The following information should be collected and analysed:

Before Data

- Collisions: Minimum of 3 years data;
- Traffic Speeds: Mean speeds in accordance with the policy appropriate locations.

After Data

- Collisions: a minimum of 3 years data;
- Traffic Speeds: mean speeds, as above, to be collected, at the earliest 3 months after the speed limit change but no later than 12 months after the speed limit change.

It is recommended that the Speed Limit Policy is reviewed periodically and specifically after 12 months of use.
