

STAFFORDSHIRE

Draft Local Transport Plan

2025

Analysis of Car Journeys to our Town Centres

TomTom Analysis: Type 1 Settlements Summary

Method

TomTom data allows for detailed, geographically specific analysis to be conducted. In order to build a picture of who is using Staffordshire Type 1 settlement town centre TomTom data from vehicular journeys has been used. The process consists of;

- Defining the town centre

We wanted to make sure that the traditional town centre for each of the settlements was as accurate as possible. This meant carefully choosing which town centre car parks, supermarkets and shops fitted into proximity of the centres. We also aimed to exclude as many residential areas as possible, to only show when town centres are used for leisure, amenities and retail purposes.

- TomTom Analysis

After drawing the town centre regions, this was then uploaded to TomTom along with the CAST settlement file, and the neighbouring county boundaries. The 11 separate reports were generated to cover all Saturdays in 2024, where any of the trips made from 00:00-24:00 were included. Also, a parameter was included which meant that a trip could start in Cannock at 23:50 on a Friday PM, arrive into Stafford town centre at 00:10 and be recorded as a trip. External trips were also included, this meant if the trip did not start in any of the locations shown in appendix 1 then the trips would be recorded as having an external origin.

- Mapping

As seen in each type 1 settlement report, maps have been produced to visualise where trips are originating from. This has added in the analysis of the data.

Summary of the data

Some broad conclusions can be made from the TomTom data. Figure 1 shows the number of trips recorded from each town/city centre on a Saturday. It shows that Stafford attracts the highest number of Saturday trips to its town centre than any other type 1 settlement in Staffordshire. Figure 1 also shows how the most common hour for the start of journey times vary, a majority of trips start between 11-12pm, as you would presume people are heading into the town centres for shopping

amenities. It is interesting to note that the peak hour for Newcastle-under-Lyme is 6-7pm, this could mean that the nighttime economy in which people will visit Newcastle's town centre for activities, restaurants and pubs attract more people than it does shopping during the day, for shopping perhaps. The peak distance for trips made is 1-2km as a majority, these are journeys that are considered walkable or cyclable. Consistently the most common journey times are 5-10 minutes long.

	No. of trips	Most common Hour	Most common Distance	Most common journey time
Stafford	191,200	11-12pm	2-3km	05-10mins
Burton	106,456	11-12pm	1-2km	05-10mins
Lichfield	90,346	11-12pm	1-2km	05-10mins
Tamworth	75,080	12-13 pm	2-3km	05-10mins
Newcastle	70,079	6-7pm	1-2km	05-10mins
Cannock	32,952	12-13 pm	2-3km	05-10mins
Stone	25,570	11-12pm	1-2km	05-10mins
Rugeley	25,531	11-12pm	1-2km	05-10mins
Uttoxeter	18,750	11-12pm	1-2km	05-10mins
Burntwood	8,187	4-5 pm	1-2km	05-10mins
Kids Grove	7,870	12-13 pm	1-2km	05-10mins

Figure 1: Summary of TomTom Analysis

In addition, figure 2 shows a matrix of trips from the CAST origin settlements to each of the town centres. Comparing the results in this way allow cross settlement analysis to be conducted. For example, it shows and supports existing relationships such as Kids Grove, Butt Lane and Talke with the City of Stoke-on-Trent. It also may highlight relationships that are higher than expected, such as the 13.26% of journeys that are made from Cannock to Burntwood Town Centre on Saturdays, which is higher than the 6.69% of trips from Lichfield.

Conclusion

These results could highlight where investment in public transport could be made. This data shows vehicular journey between settlements and town centres, which means that there is a purpose for these journeys. If these journeys can be made by using public transport or local cycling, walking and wheeling infrastructure this would relieve pressure off the road network and contribute to healthier lifestyles.

		Destination										
		Burntwood Town Centre	Burton Town Centre	Cannock Town Centre	Lichfield City Centre	Tamworth Town Centre	Newcastle Town Centre	Kidsgrove Town Centre	Stone Town Centre	Stafford Town Centre	Rugeley Town Centre	Uttoxeter Town Centre

Appendix 1: Settlements and Districts used in TomTom Analysis

TomTom data: Burntwood Town Centre

TomTom analysis has been conducted to determine where vehicular journeys start and end. Using the CAST settlements (Capability to achieve suitable transport) we can analyse where journeys from one CAST area (or wider county) end their trip. These settlements are used as origin points and the town centre areas used as destination points. For this analysis Burntwood Town Centre has been defined in figure 1 below. The area that is included as the traditional town centre covers approximately 0.05km². Although the town centre is small trip attractors include, Burntwood Town Centre shopping centre, a post office and library. There are also a few restaurants in this area.

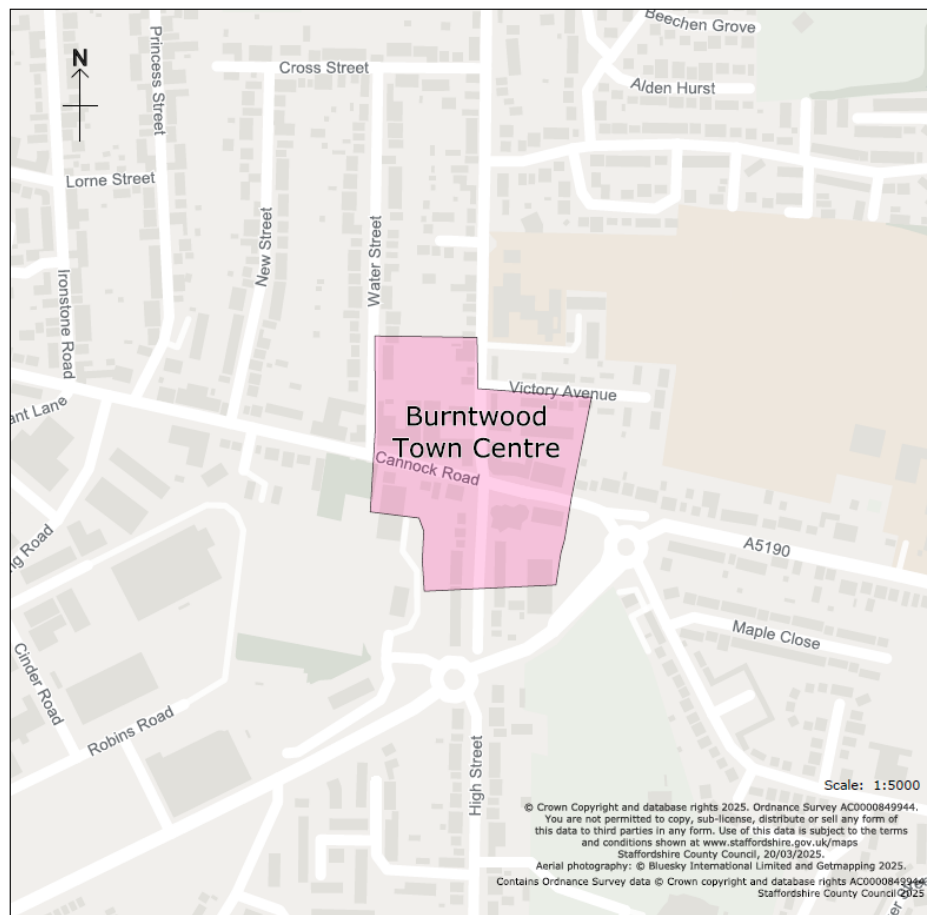

Figure 1: Burntwood Town Centre

In total 8,187 vehicular trips on Saturdays in 2024 where Burntwood Town Centre was the destination were recorded. These trips covered a 24-hour period. This equates to 157 trips every Saturday. As TomTom is only an approximate sample of 10% of all trips on the network. It can be estimated that there are 81,870 vehicular trips that end in Cannock Centre on Saturdays every year. The most common start hour for trips is 4-5 pm, with the most common length being trips between 1-2km and the most common duration of trips being 5-10 minutes.

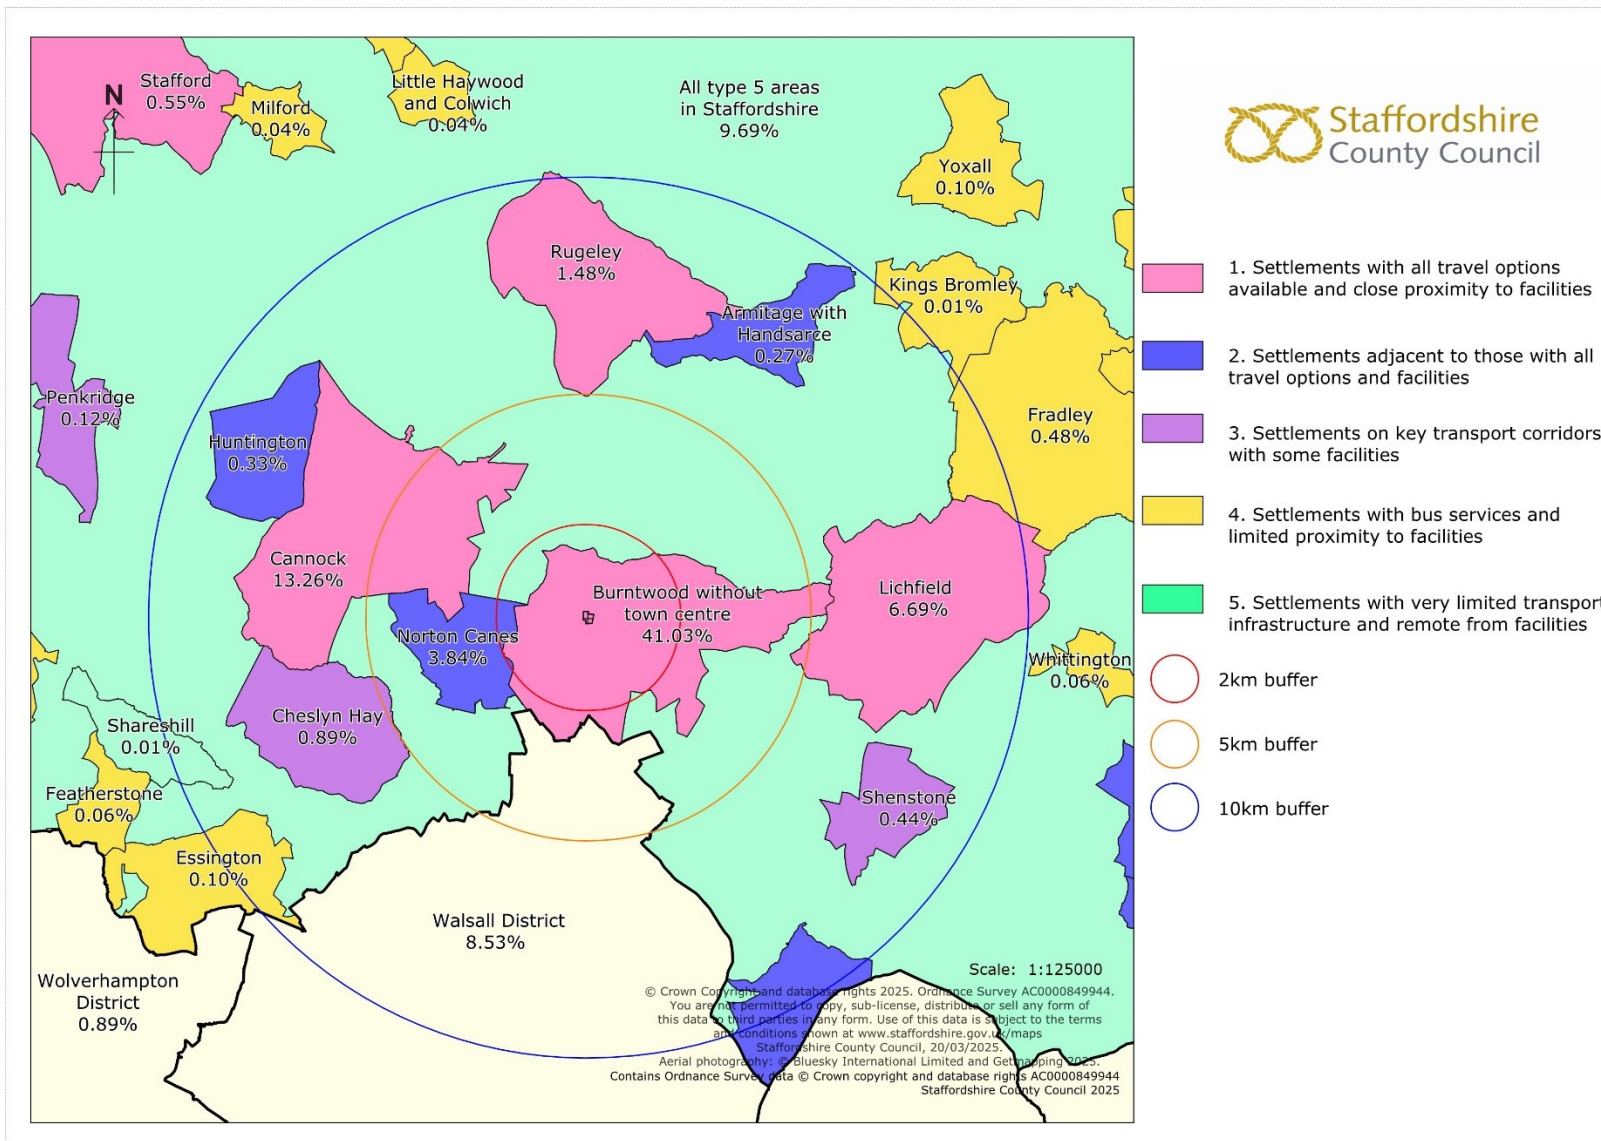

Figure 2: Trips form local areas to Burntwood Town Centre

Figure 2 shows trips from the local area into Burntwood Town Centre. The figure shows that over 75% of all trips on a Saturday are trips originating from within a 10km radius of Burntwood Town Centre. Included within the 10km radius, two fifths of all trips to the town centre are coming from the region of Burntwood, this suggests that locals to Burntwood are frequenting the town centre. There is also a strong relation between the other local type 1 settlements and Burntwood Town Centre, as 6.69% of trips are originating from Lichfield and 13.26% of trips from Cannock.

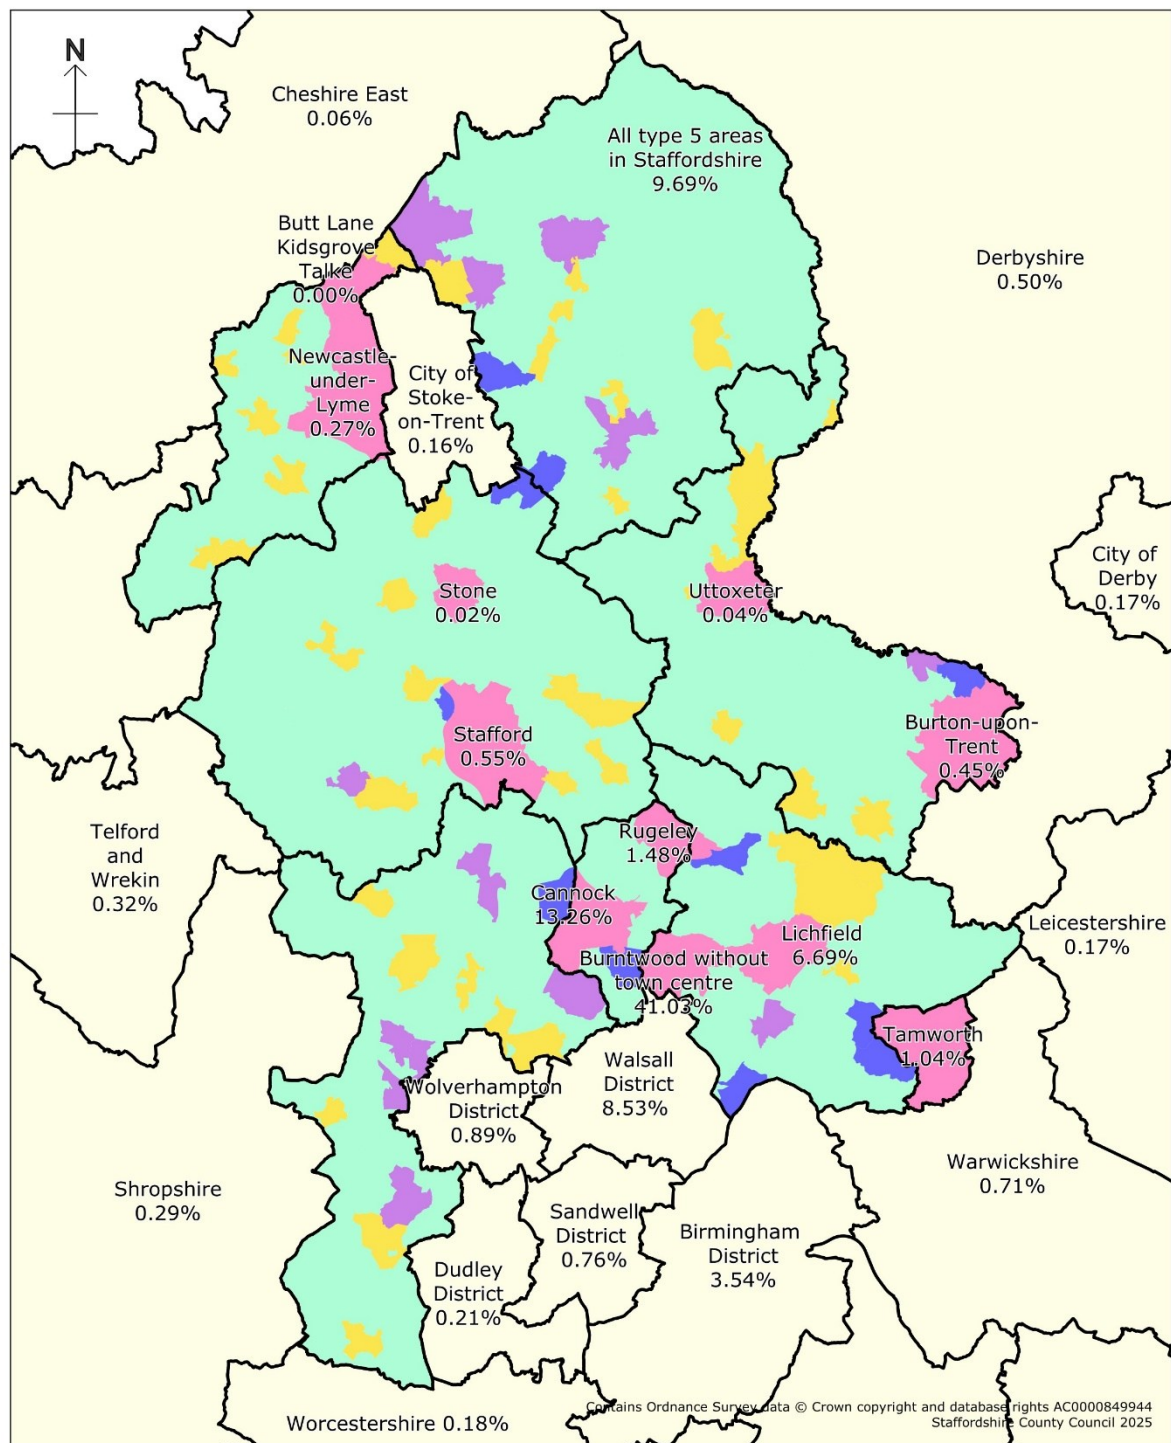

Figure 3: Top 10 origin regions to Burntwood Town Centre

In support of what can be seen in figure 2, figure 3 shows the top 10 origin settlements that trips to Burntwood Town Centre originate from. Figure 3 also highlights how the location of Burntwood plays apart in its attraction, you can see this as it borders Walsall District which 8.53% of trips originate from.

On a wider scale figure 4 shows trips from Staffordshire type 1 settlements along with neighbouring counties. This map helps to demonstrate how a majority of the trips originate from settlements in the South of Staffordshire.

- 1. Settlements with all travel options available and close proximity to facilities
- 2. Settlements adjacent to those with all travel options and facilities
- 3. Settlements on key transport corridors with some facilities
- 4. Settlements with bus services and limited proximity to facilities
- 5. Settlements with very limited transport infrastructure and remote from facilities

Figure 4: Wider county trips to Burntwood Town Centre

TomTom Data: Burton-upon-Trent Town Centre

TomTom analysis has been conducted to determine where vehicular journeys start and end. Using the CAST settlements (Capability to achieve suitable transport) we can analyse where journeys from one CAST area (or wider county) end their trip. These settlements are used as origin points and the town centre areas used as destination points. For this analysis Burton-upon-Trent Town Centre has been defined in figure 1 below. The area that is included as the traditional town centre covers approximately 0.28km². Trip attractors to the town centre include a wide range of shops, retail parks and the Octagon shopping centre. There is also a cinema, restaurants and pubs which will attract visitors throughout the day on Saturdays.

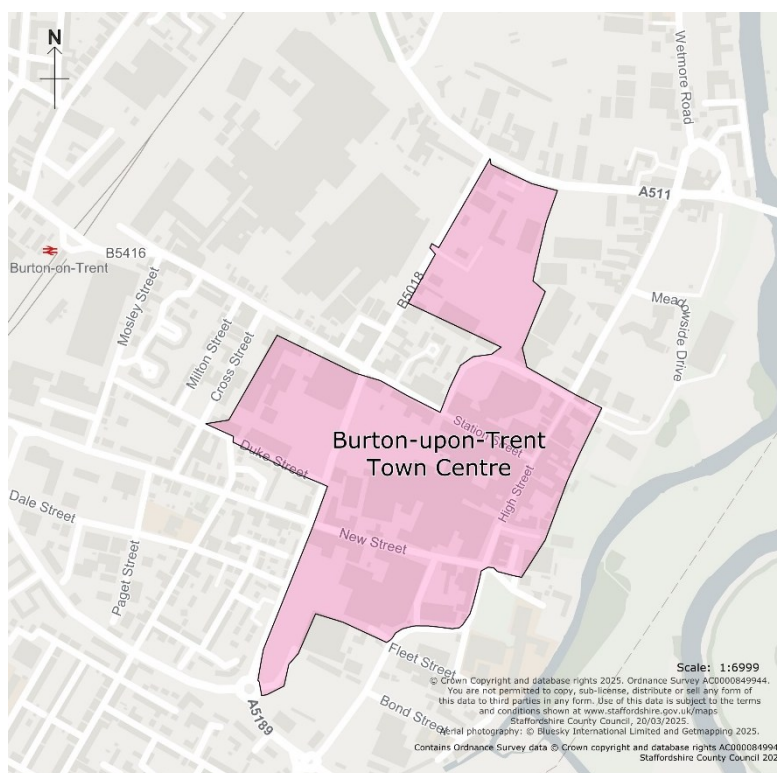

Figure 1: Burton-upon-Trent Town Centre

In total 106,456 vehicular trips on Saturdays in 2024 where Burton-upon-Trent Town Centre was the destination were recorded. These trips covered a 24-hour period. This equates to 2,047 trips every Saturday. As TomTom is only an approximate sample of 10% of all trips on the network it can be estimated that there are 1,064,560 vehicular trips that end in Burton-upon-Trent Town Centre each Saturday a year. The most common start hour for trips is 11-12pm, with the most common length being trips between 1-2km and the most common duration of trips being 5-10 minutes.

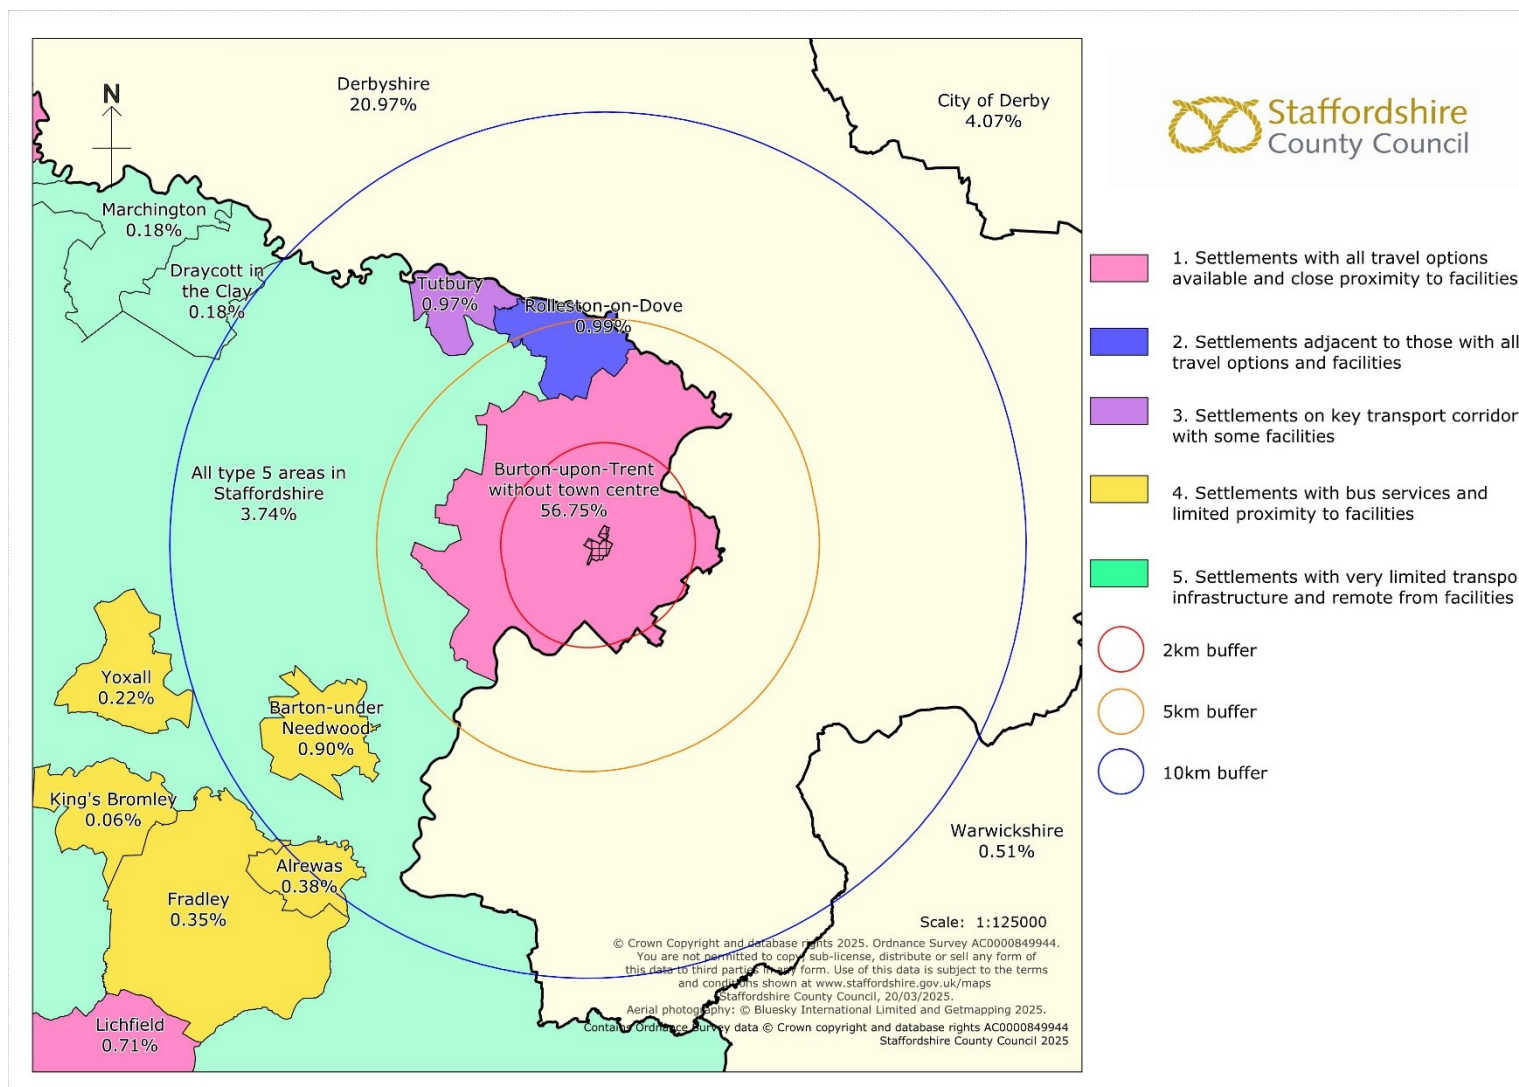

Figure 2: Local trips to Burton-upon-Trent Town Centre

Figure 2 shows trips from the local area into Burton-upon-Trent Town Centre on a Saturday. It shows that over half the number of trips that end in Burton-upon-Trent Town Centre have originated from the wider Burton-upon-Trent area, showing how locals use the town centre on a Saturday. Figure 2 also shows the attraction from settlements North of Burton-upon-Trent from type 2 and 3 such as Tutbury.

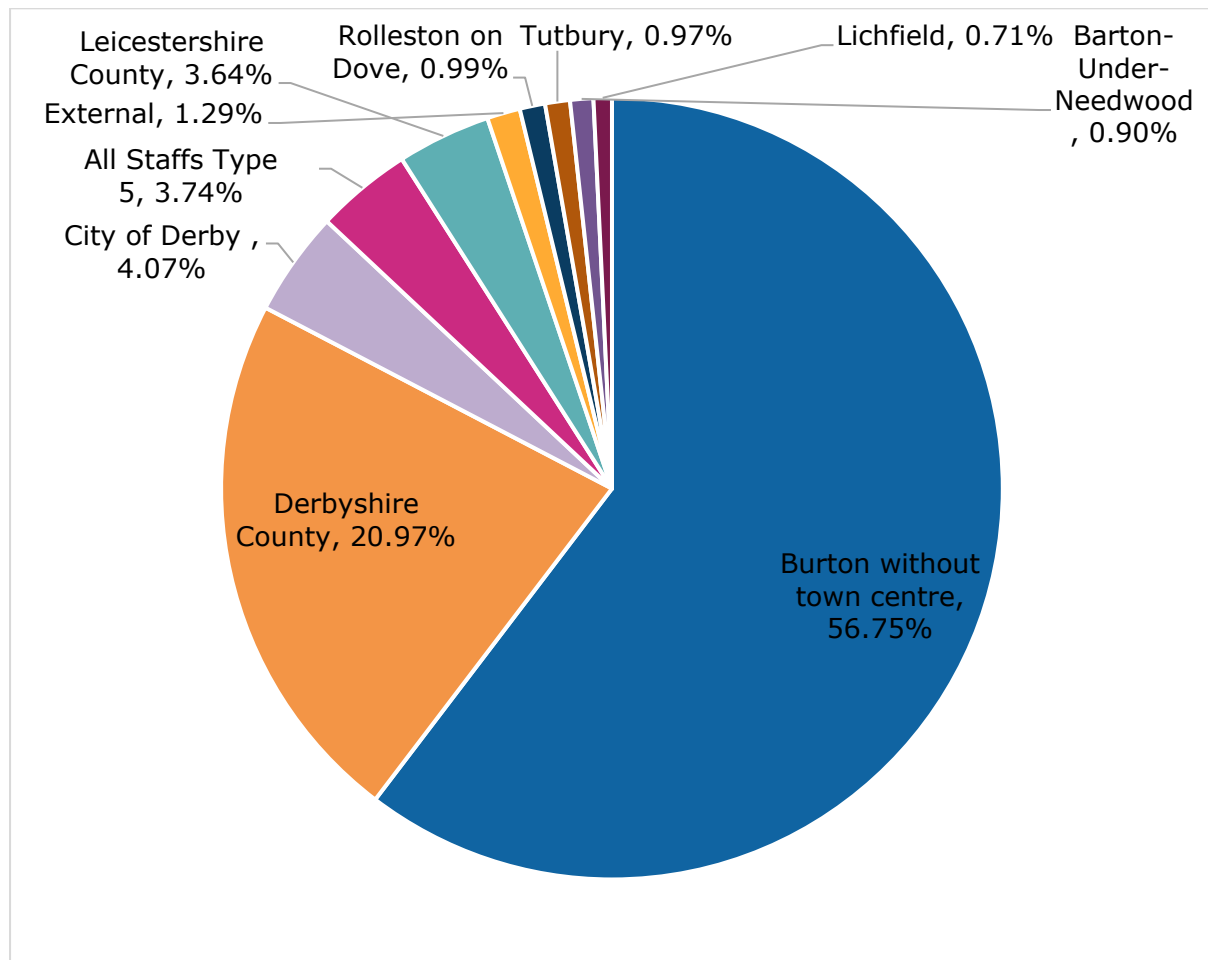

Figure 3: Top 10 origin regions to Burton-upon-Trent Town Centre

In support of what can be seen in figure 2, figure 3 shows the top 10 origin settlements that trips to Burntwood Town Centre originate from. Figure 3 highlights that just over 20% of all trips originate from the county of Derbyshire, which surrounds Burton-upon-Trent to the North, East and South. This region will include areas such as Swadlincote and Newhall.

On a wider scale figure 4 shows trips from Staffordshire's type 1 settlements along with neighbouring counties. This maps highlights the pull from the East of the county and neighbouring counties.

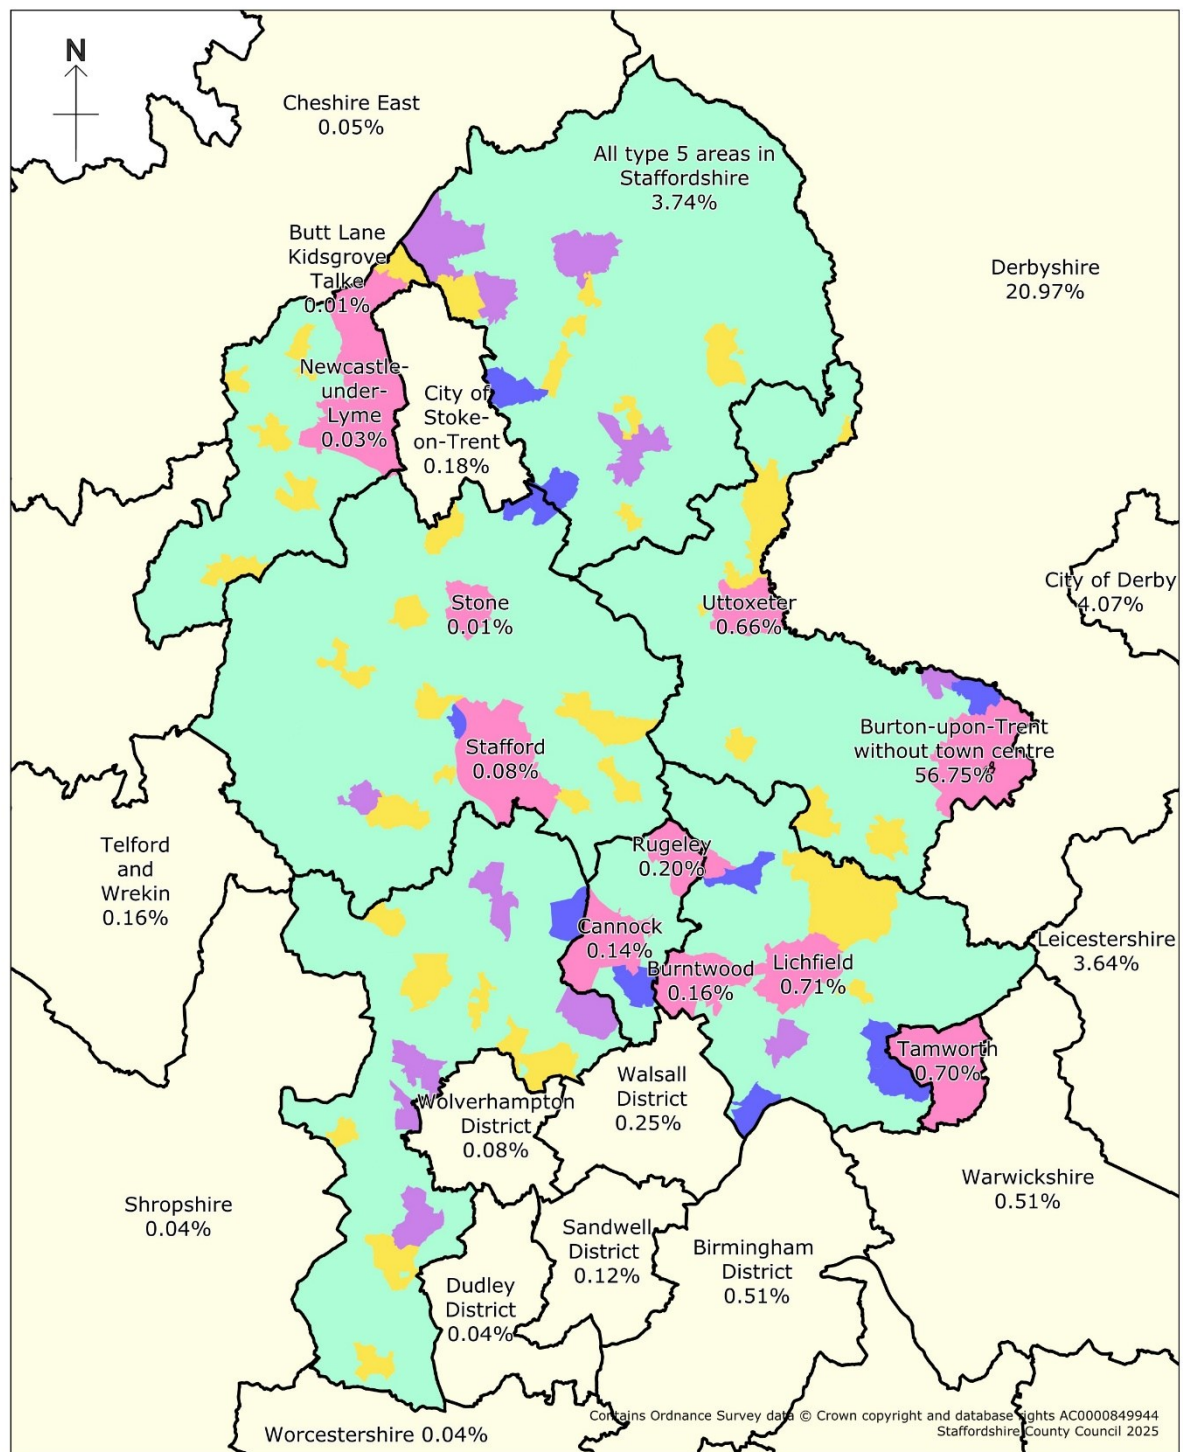

Figure 4: Wider county trips to Burton-upon-Trent Town Centre

TomTom data: Cannock Town Centre

TomTom analysis has been conducted to determine where vehicular journeys start and end. Using the CAST settlements (Capability to achieve suitable transport) we can analyse where journeys from one CAST area (or wider county) end their trip. These settlements are used as origin points and the town centre areas used as destination points. For this analysis Cannock Town Centre has been defined in figure 1 below. The area that is included as the traditional town centre covers approximately 0.13km². Trip attractors in Cannock Town Centre include Cannock shopping centre and other shops in the town centre. There are also many pubs, restaurants and bars, along with the Prince of Wales theatre.

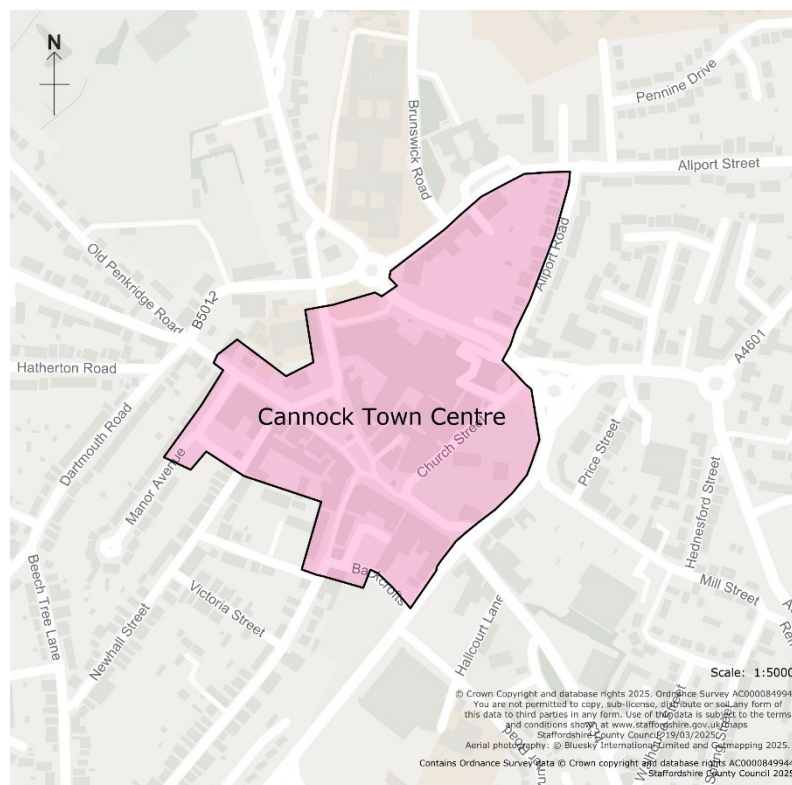

Figure 1: Cannock Town Centre

In total 32,952 vehicular trips on Saturdays in 2024 where Cannock Town Centre was the destination were recorded. These trips covered a 24-hour period. This equates to 633 trips every Saturday. As TomTom is only an approximate sample of 10% of all trips on the network. It can be estimated that there are 329,520 vehicular trips that end in Cannock Centre each Saturday every year. The most common start hour for trips is Midday-1pm, with the most common length being trips between 2-3km and the most common duration of trips being 5-10 minutes.

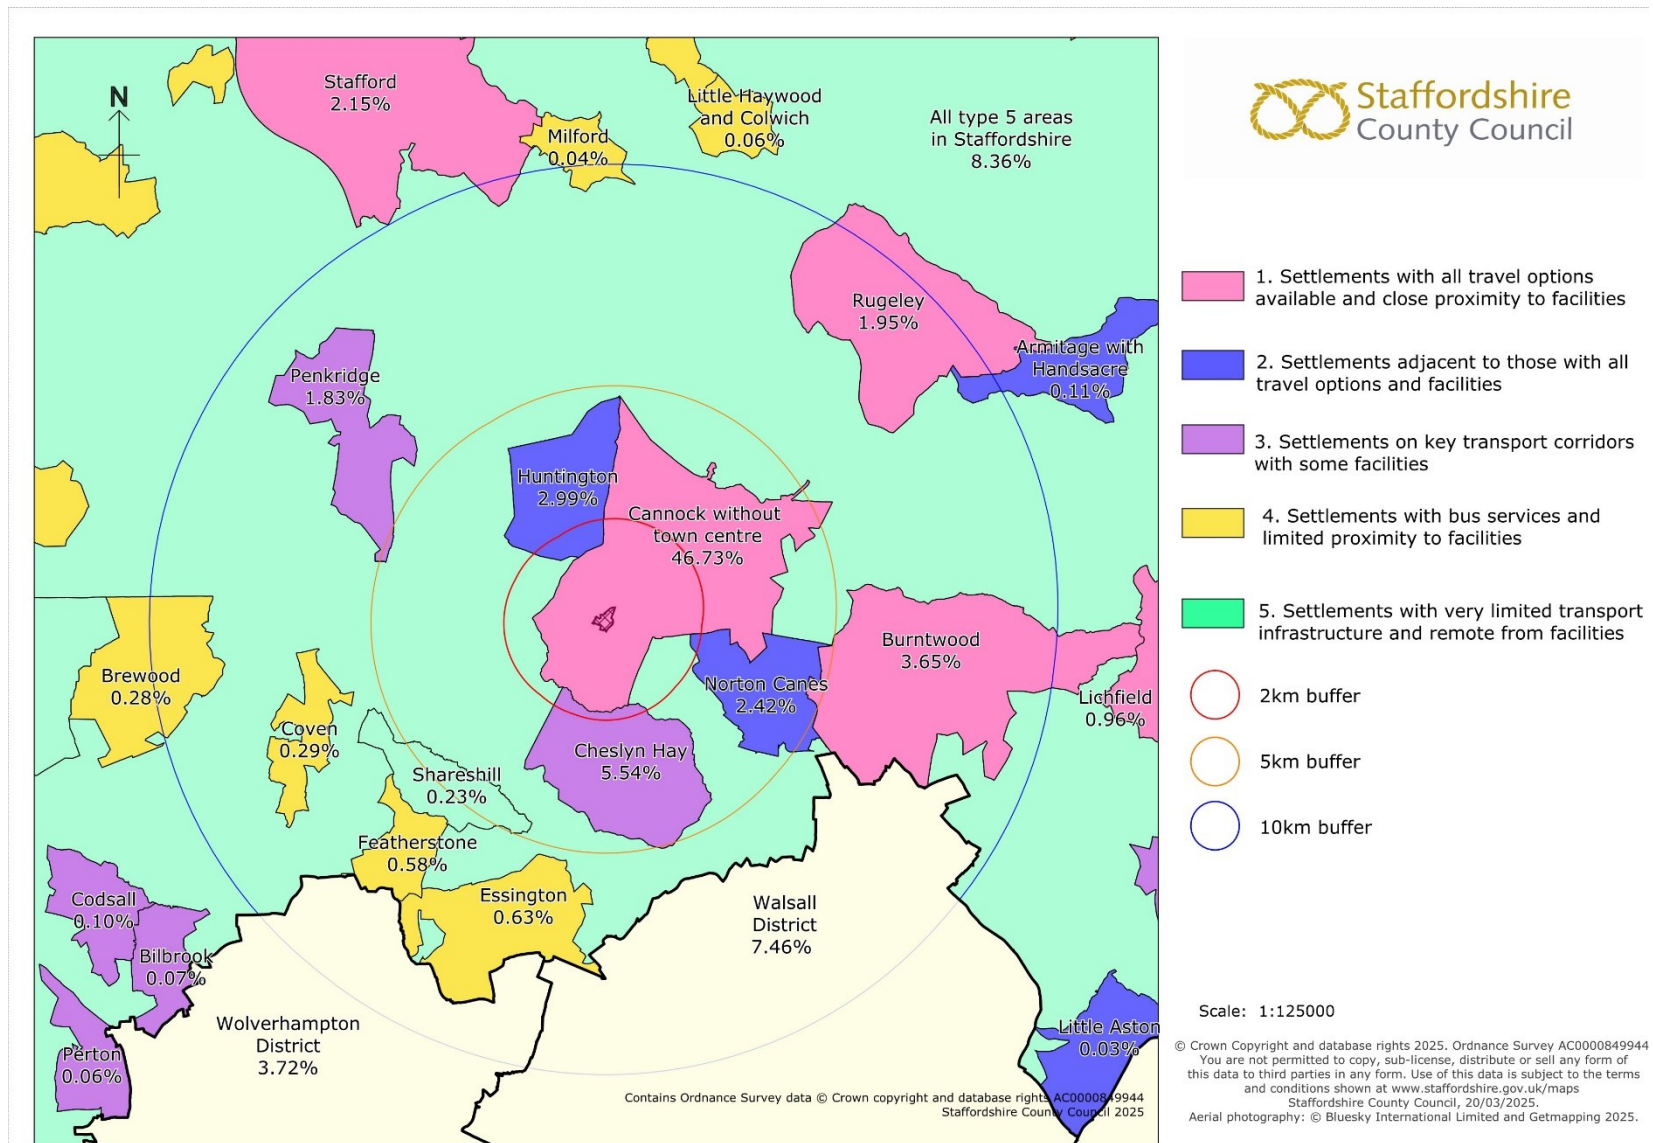

Figure 2: Trips from local areas to Cannock Town Centre

Figure 2 shows the trips from the local area into Cannock Town Centre. It shows that there are many settlements within 10km of the Town Centre that visit Cannock Town Centre on a Saturday. These include type 2/3/4 settlements such as Penkridge, Huntington and Norton Canes.

In support of what can be seen in figure 2, figure 3 shows the top 10 origin settlements. This means these origins are the 10 most popular which visit Cannock Town Centre on a Saturday. Figure 3 also highlights the pull that Cannock has from Walsall, Wolverhampton and Birmingham districts as these three locations fall outside of Staffordshire.

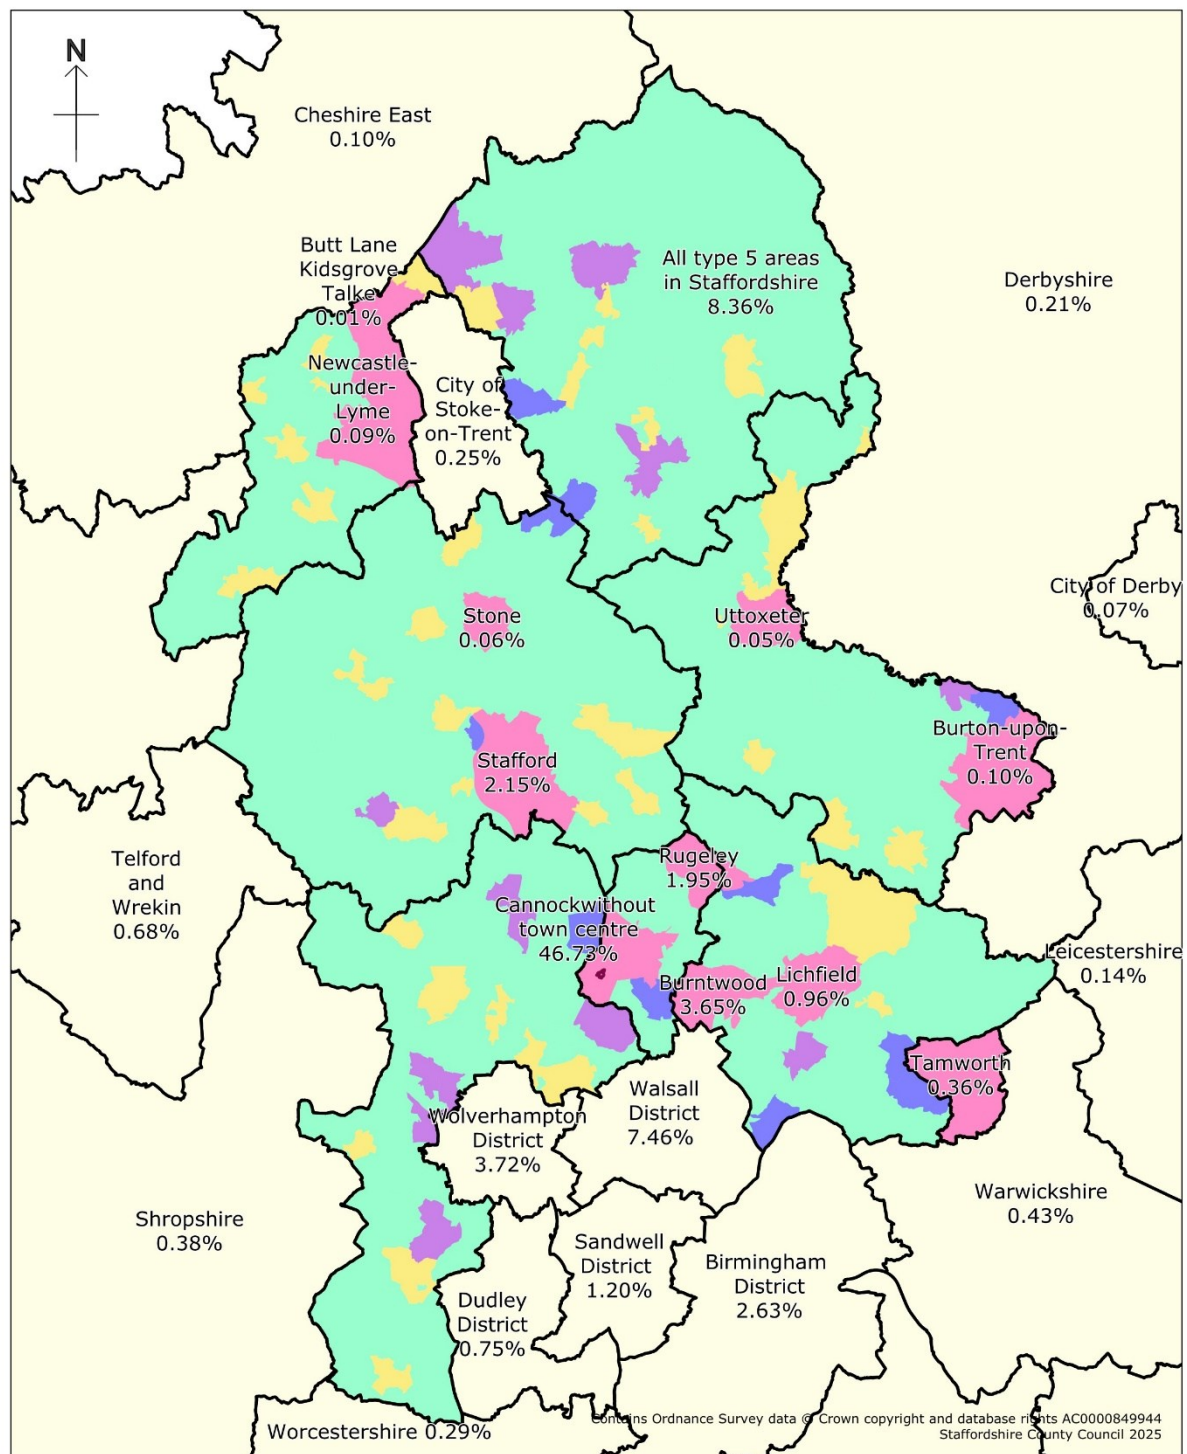

Figure 3: Top 10 origin regions to Cannock Town Centre

On a wider scale figure 4 shows trips from Staffordshire type 1 settlements along with neighbouring counties.

- 1. Settlements with all travel options available and close proximity to facilities
- 2. Settlements adjacent to those with all travel options and facilities
- 3. Settlements on key transport corridors with some facilities
- 4. Settlements with bus services and limited proximity to facilities
- 5. Settlements with very limited transport infrastructure and remote from facilities

Figure 4: Wider county trips to Cannock Town Centre

TomTom Data: Kidsgrove Town Centre

TomTom analysis has been conducted to determine where vehicular journeys start and end. Using the CAST settlements (Capability to achieve suitable transport) we can analyse where journeys from one CAST area (or wider county) end their trip. These settlements are used as origin points and the town centre areas used as destination points. For this analysis Kidsgrove Town Centre has been defined in figure 1 below. The area that is included as the traditional town centre covers approximately 0.04km². Kidsgrove has been chosen above the areas of Butt Lane or Talke as it has more amenities to offer. The trip attractors to Kidsgrove Town Centre include shops such as Home Bargains as well as smaller retail spaces along the high streets. There are also a few takeaways, pubs and restaurants in the area.

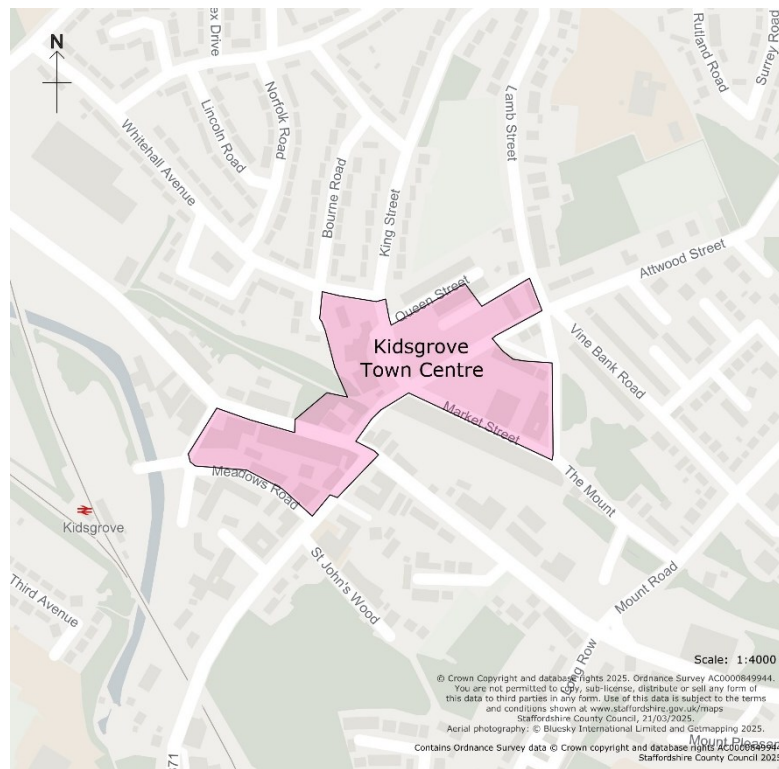

Figure 1: Kidsgrove Town Centre

In total 7,870 vehicular trips on Saturdays in 2024 where Kidsgrove Town Centre was the destination were recorded. These trips covered a 24-hour period. This equates to 151 trips every Saturday. As TomTom is only an approximate sample of 10% of all trips on the network. It can be estimated that there are 78,700 vehicular trips that end in Kidsgrove Town Centre each Saturday a year. The most common start hour for trips is Midday-1pm, with the most common length being trips between 1-2km and the most common duration of trips being 5-10 minutes.

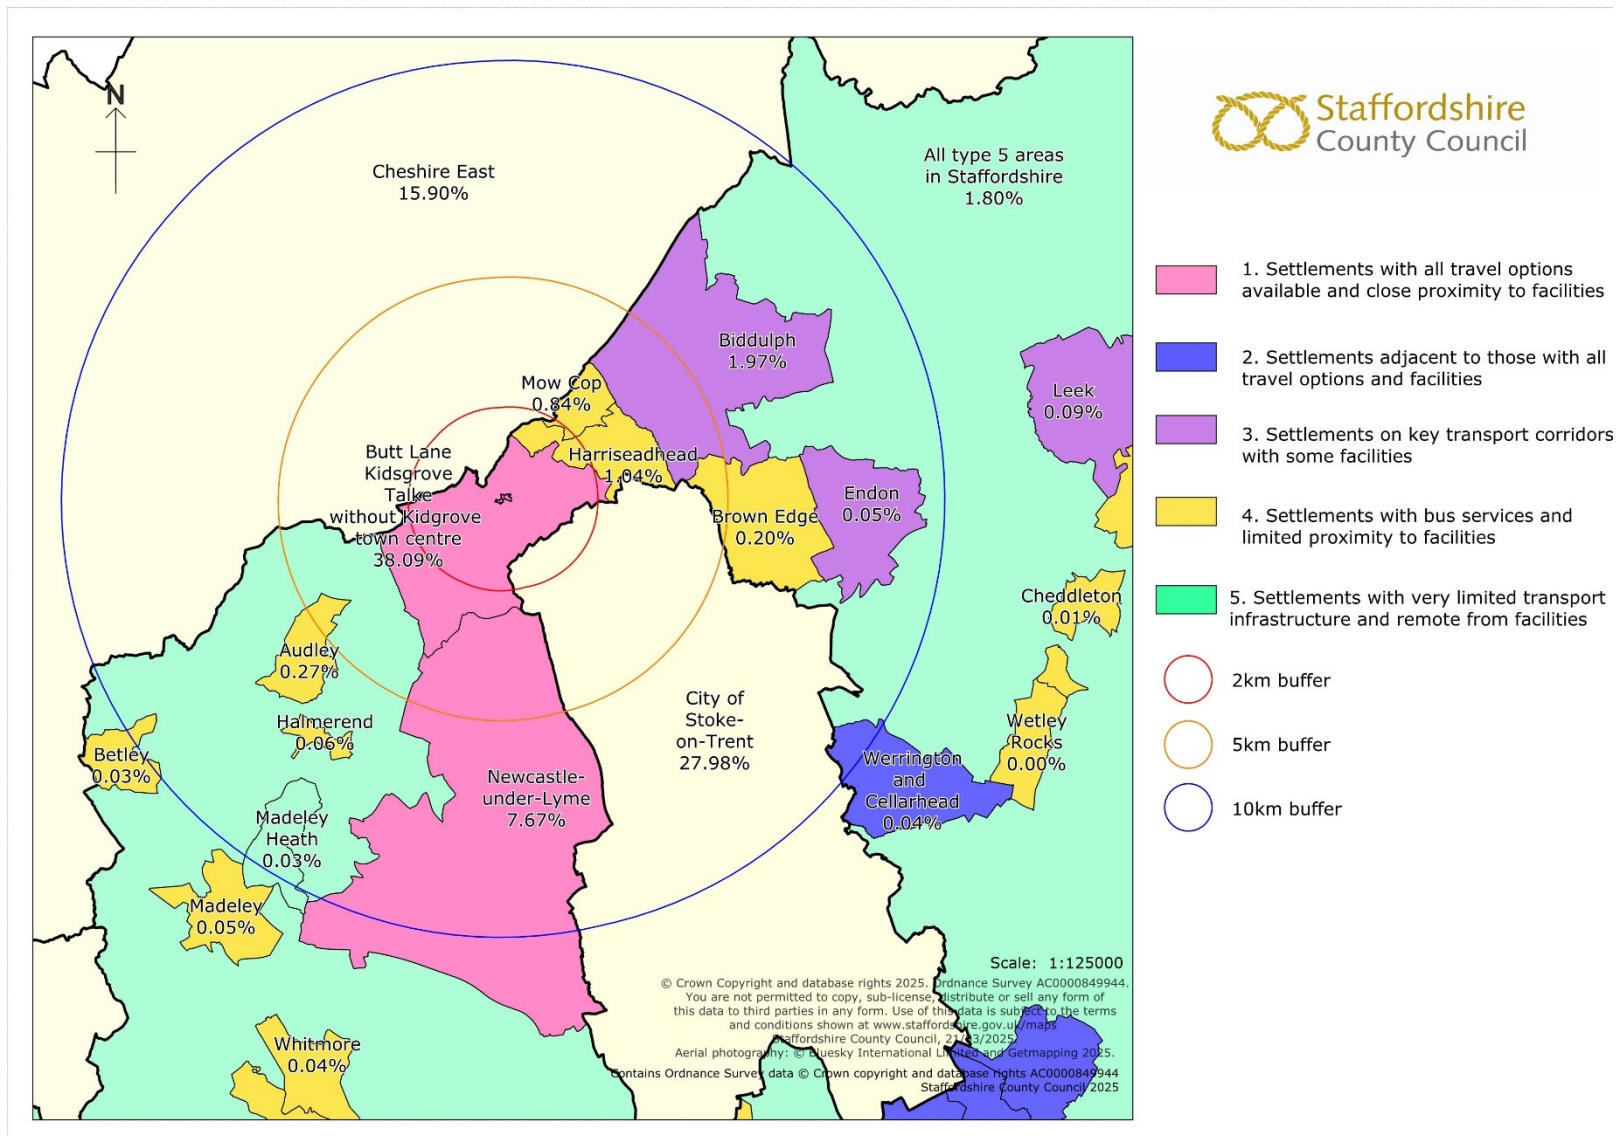

Figure 2: Trips from local areas to Kidsgrove Town Centre

Figure 2 shows trips from the local area into Kidsgrove Town Centre. 38.09% of trips come from Talke, Butt Lane and the wider Kidsgrove area into the town centre on Saturdays in 2024. The City of Stoke-on-Trent has the second largest number of trips originating from it, with just under 28% of trips. Following this, Cheshire East has 15.90% of trips originating from the county, this will be as Cheshire East borders Kidsgrove, Talke and Butt Lane Type 1 settlement area.

In support of what can be seen in figure 2, figure 3 shows the top 10 origin settlements. This means these origins are the 10 most popular settlements which visit Newcastle Town Centre on a Saturday. This chart also highlights the pull from smaller settlements in the surrounding areas to the town centre.

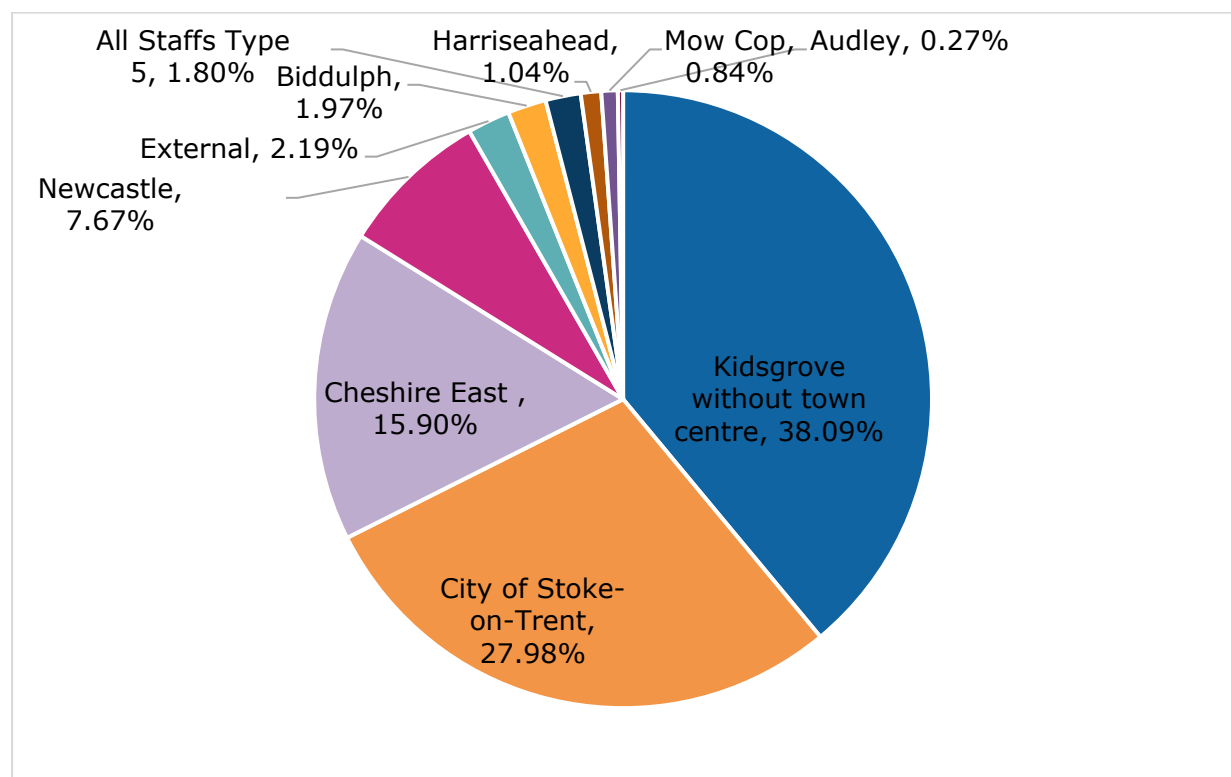

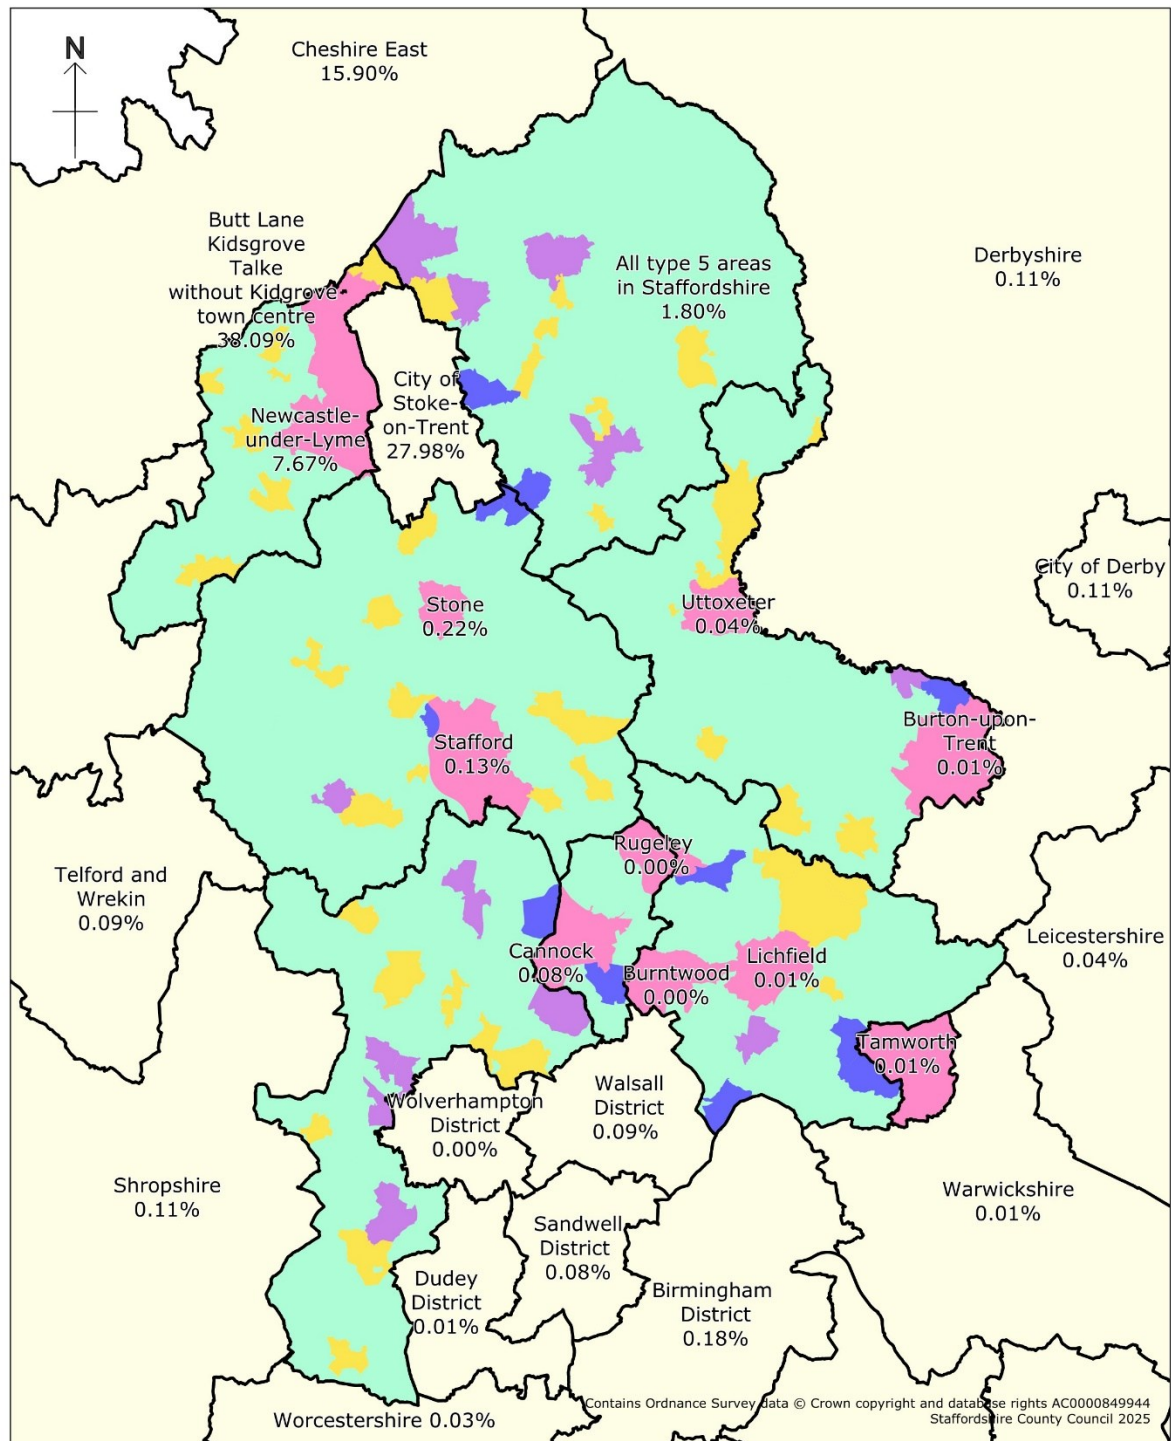

Figure 3: Top 10 origin regions to Kidsgrove town centre

On a wider scale figure 4 shows trips from Staffordshire's type 1 settlements, along with neighbouring counties. This map highlights the lack of attraction from the central and south of Staffordshire.

- 1. Settlements with all travel options available and close proximity to facilities
- 2. Settlements adjacent to those with all travel options and facilities
- 3. Settlements on key transport corridors with some facilities
- 4. Settlements with bus services and limited proximity to facilities
- 5. Settlements with very limited transport infrastructure and remote from facilities

Scale: 1:400000

Figure 4: Wider county trips to Kidsgrove Town Centre

TomTom data: Lichfield City Centre

TomTom analysis has been conducted to determine where vehicular journeys start and end. Using the CAST settlements (Capability to achieve suitable transport) we can analyse where journeys from one CAST area (or wider county) end their trip. These settlements are used as origin points and the town centre areas used as destination points. For this analysis Lichfield City Centre has been defined in figure 1 below. The area that is included as the traditional city centre covers approximately 0.29km². Trip attractors in Lichfield City Centre include tourist/historical sites such as Lichfield Cathedral and Samuel Johnson Birthplace. There are also many shops in the city centre as well as the market on a Saturday. Lichfield City Centre also boost many pubs, restaurants and bars for one of Staffordshire busier nighttime economies.

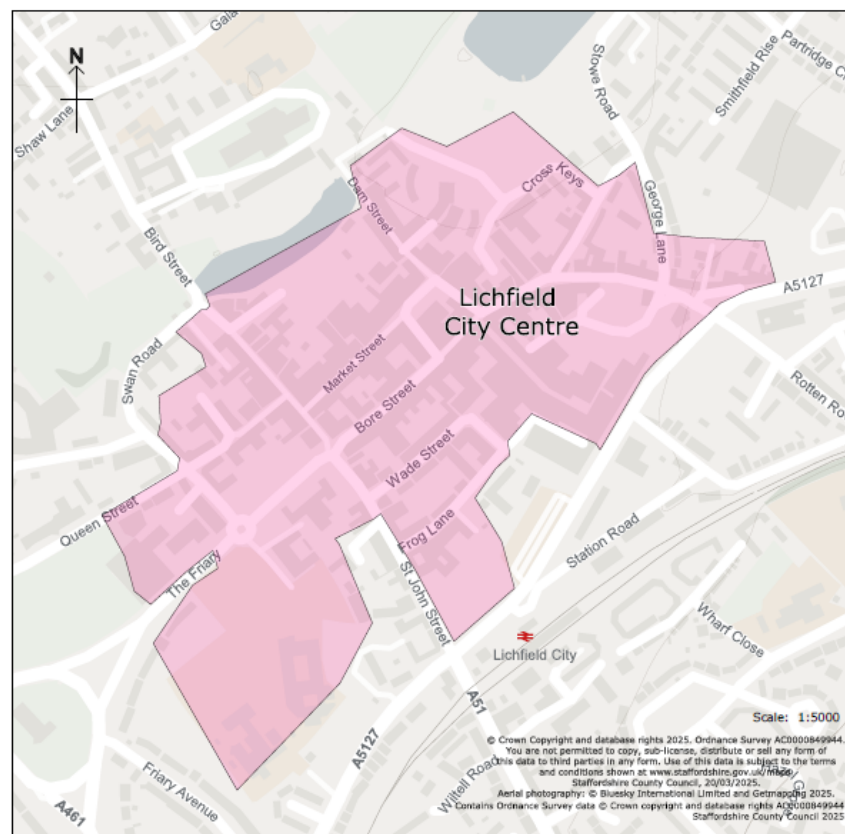

Figure 1: Lichfield City Centre

In total 90,346 vehicular trips on Saturdays in 2024 where Lichfield City Centre was the destination were recorded. These trips covered a 24-hour period. This equates to 1,737 trips every Saturday. As TomTom is only an approximate sample of 10% of all trips on the network. It can be estimated that there are 903,460 vehicular trips that end in Lichfield City Centre each Saturday a year. The most common start hour for trips is 11-Midday, with the most common length being trips between 1-2km and the most common duration of trips being 5-10 minutes.

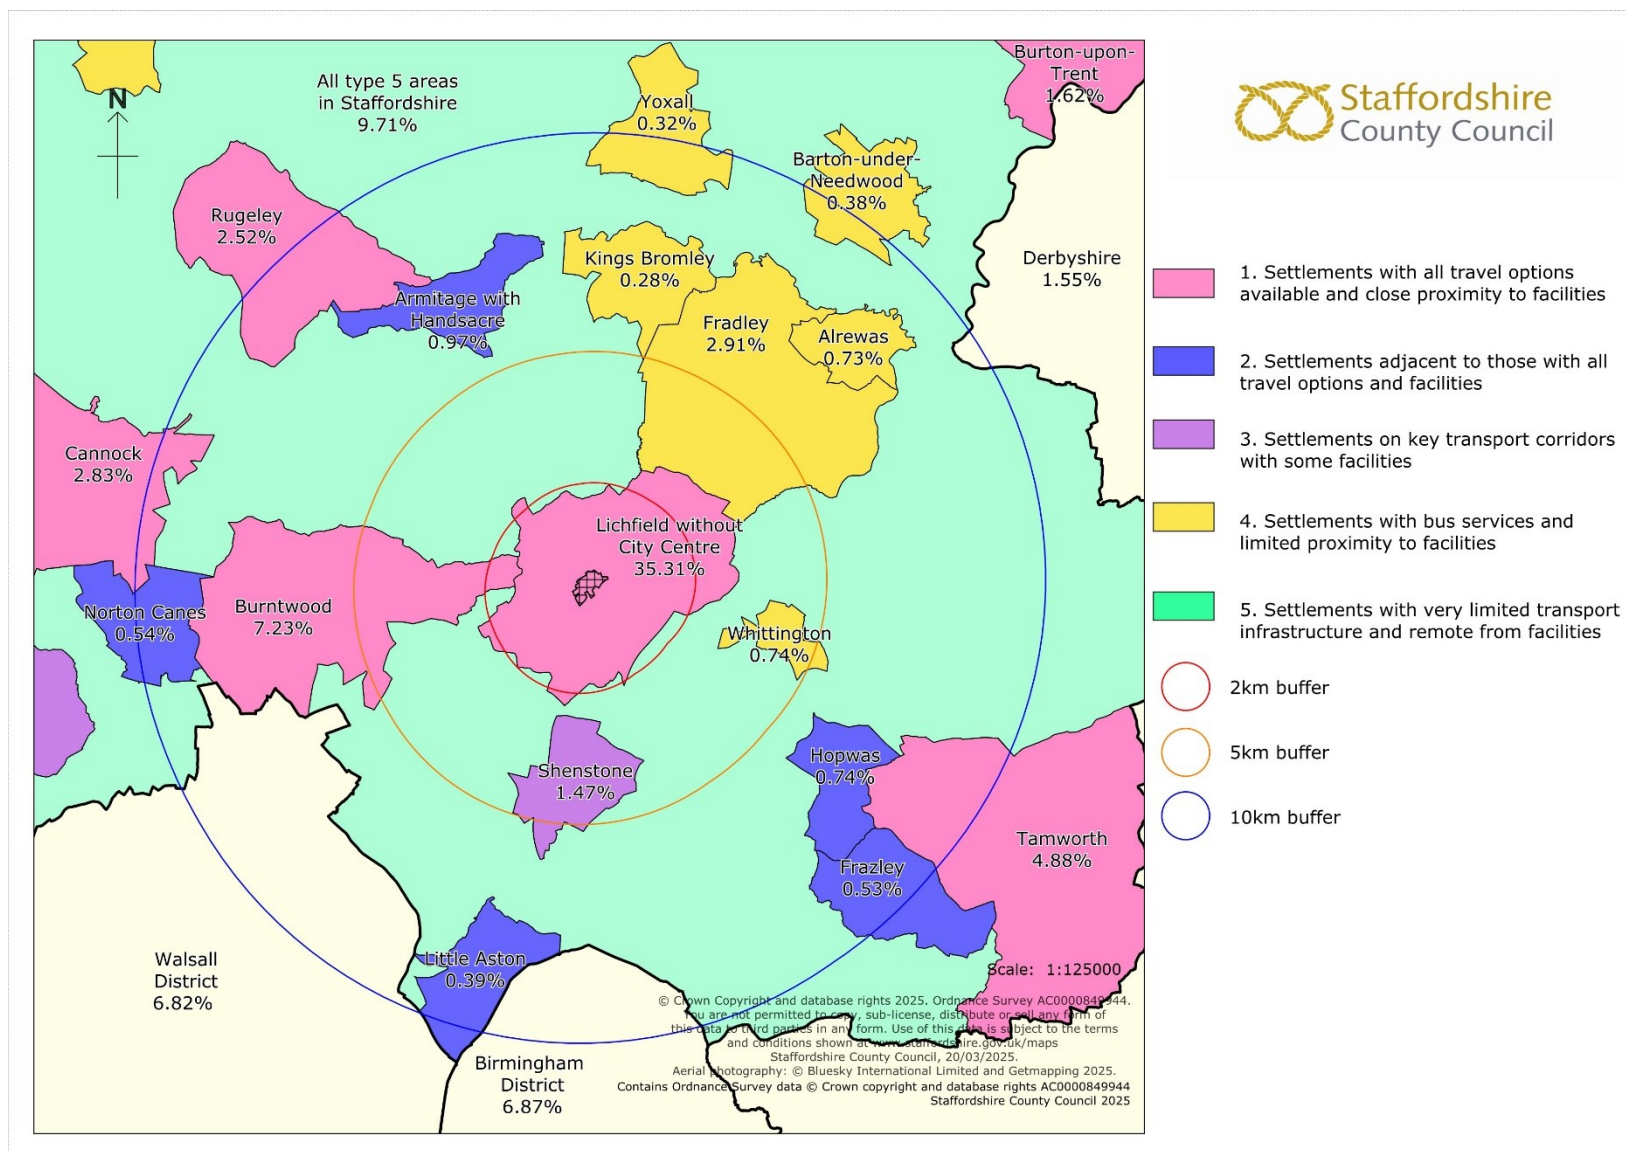

Figure 2: Trips from local areas to Lichfield City Centre

Figure 2 shows trips from the local area into Lichfield City Centre. It shows that 35.31% of trips start in the Lichfield region. After this 9.71% of trips come from the Staffordshire type 5 settlements, this will include hamlets and villages which have very limited transport infrastructure and are remote from facilities. Burntwood then has the 3rd largest percentage with 7.23% of trips. After this, is it Birmingham (6.87%) and Walsall districts (6.82%) bring in trips from outside of Staffordshire.

In support of this, the top 10 origin points can be seen in figure 3. It shows that Lichfield City Centre attracts trips from other larger type 1 settlements in Staffordshire including Burntwood, Cannock, Tamworth and Rugeley.

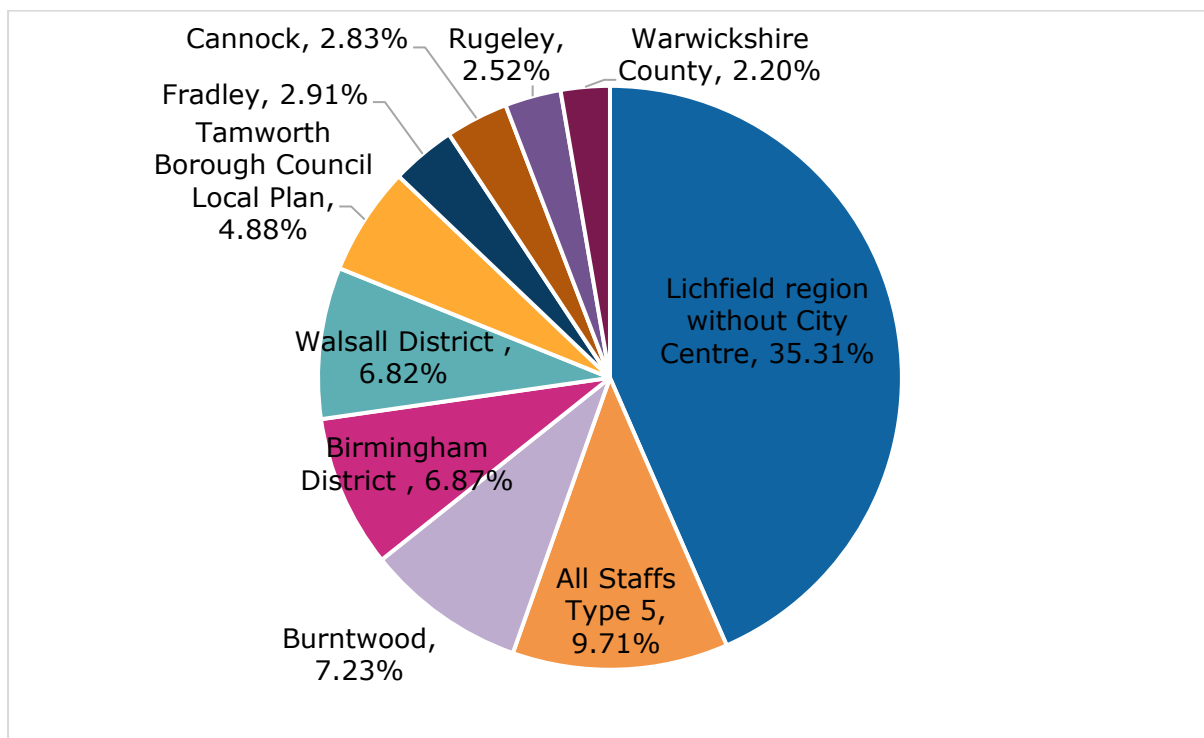

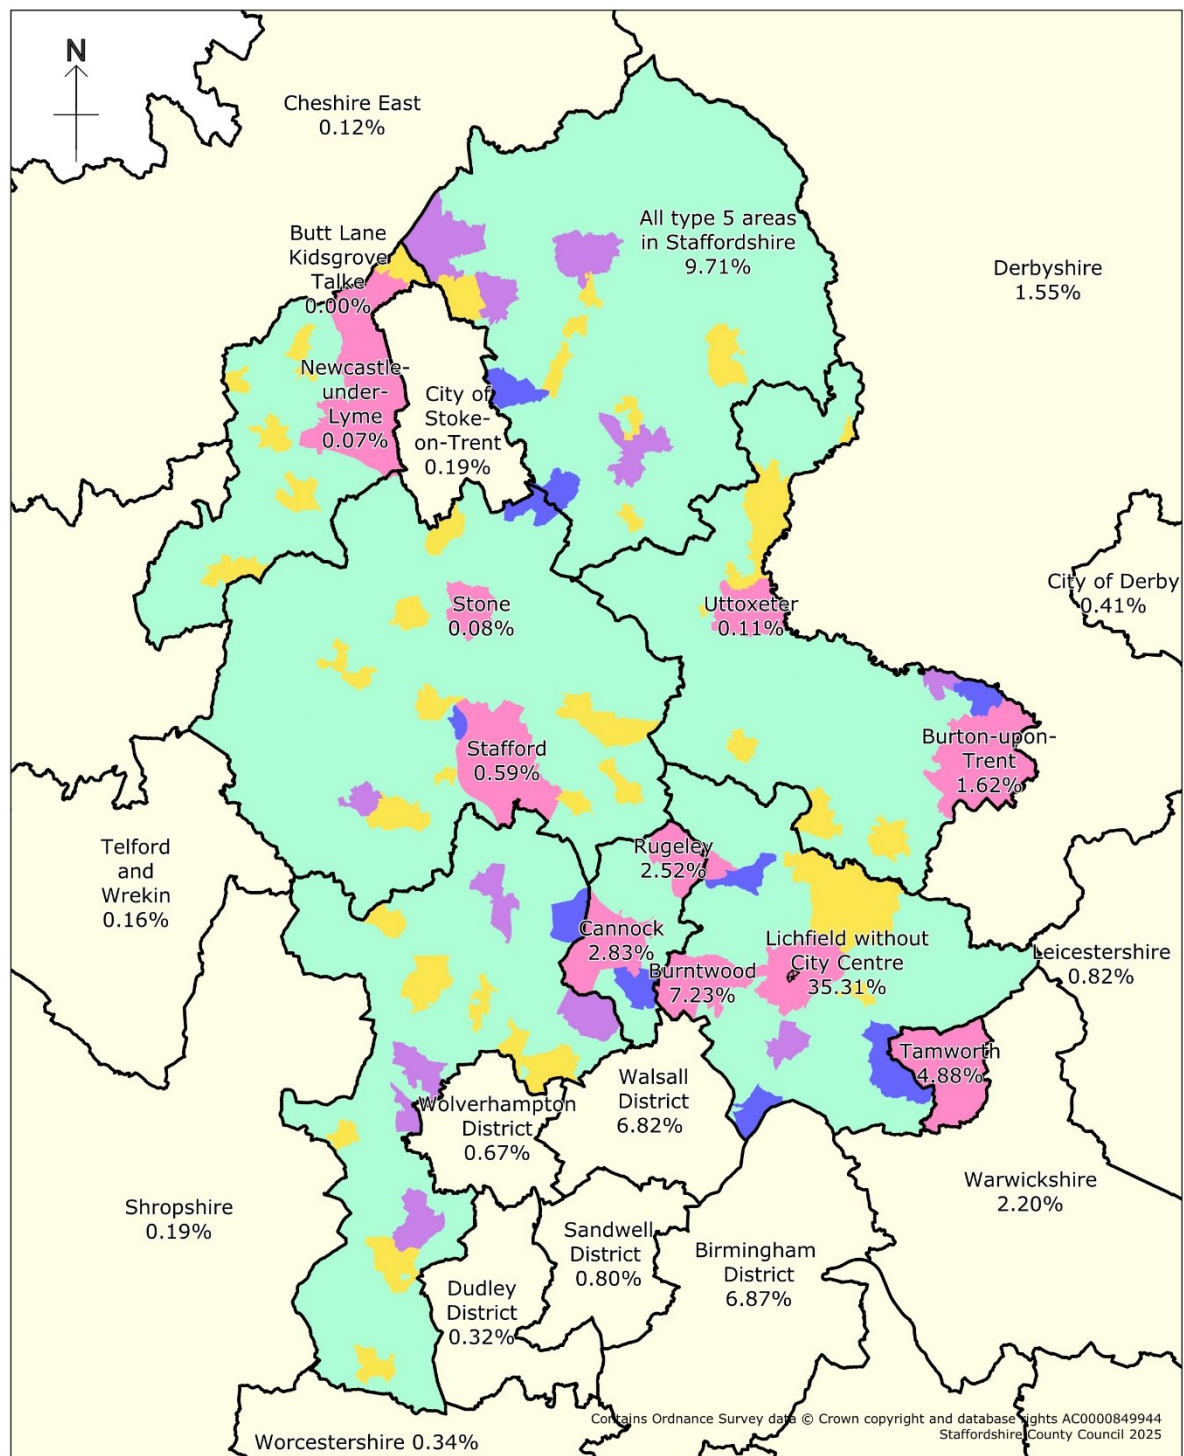

Figure 3: Top 10 origin regions to Lichfield City Centre

On a wider scale, figure 4 shows trips from Staffordshire type 1 settlements along with neighbouring counties. Figure 4 highlights the wider attraction of Lichfield from across Staffordshire and the surrounding districts.

- 1. Settlements with all travel options available and close proximity to facilities
- 2. Settlements adjacent to those with all travel options and facilities
- 3. Settlements on key transport corridors with some facilities
- 4. Settlements with bus services and limited proximity to facilities
- 5. Settlements with very limited transport infrastructure and remote from facilities

Scale: 1:400000

Figure 4: Wider county trips to Lichfield City Centre

TomTom data: Newcastle-under-Lyme Town Centre

TomTom analysis has been conducted to determine where vehicular journeys start and end. Using the CAST settlements (Capability to achieve suitable transport) we can analyse where journeys from one CAST area (or wider county) end their trip. These settlements are used as origin points and the town centre areas used as destination points. For this analysis Newcastle-under-Lyme town centre has been defined in figure 1 below. The area this is included as the traditional town centre covers approximately 0.20km². Trip attractors to Newcastle-under-Lyme town centre include various bars, restaurants and pubs in the town centre, as well as the Roebuck shopping centre and other shops along the high street. There is also a cinema, escape room, laser quest and bowling alley which would attract multiple trips throughout the day on Saturdays.

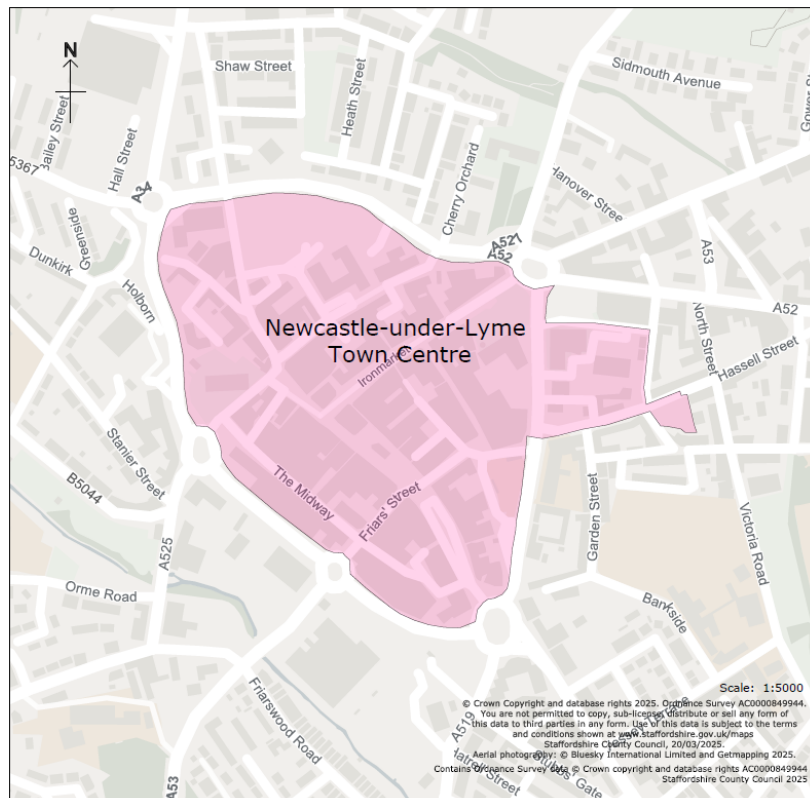

Figure 1: Newcastle-under-Lyme Town Centre

In total there were 70,079 vehicular trips on Saturdays in 2024 where Newcastle-under-Lyme town centre was the destination were recorded. These trips covered a 24-hour period. This equates to 1,347 trips every Saturday. As TomTom is only an approximate sample of 10% of all trips on the network. It can be estimated that there are 700,790 vehicular trips that end in Newcastle-under-Lyme town centre on Saturdays in 2024. The most common start hour for trips is 1800-1900, with the most common length being trips between 1-2km and the most common duration of trips being 5-10 minutes.

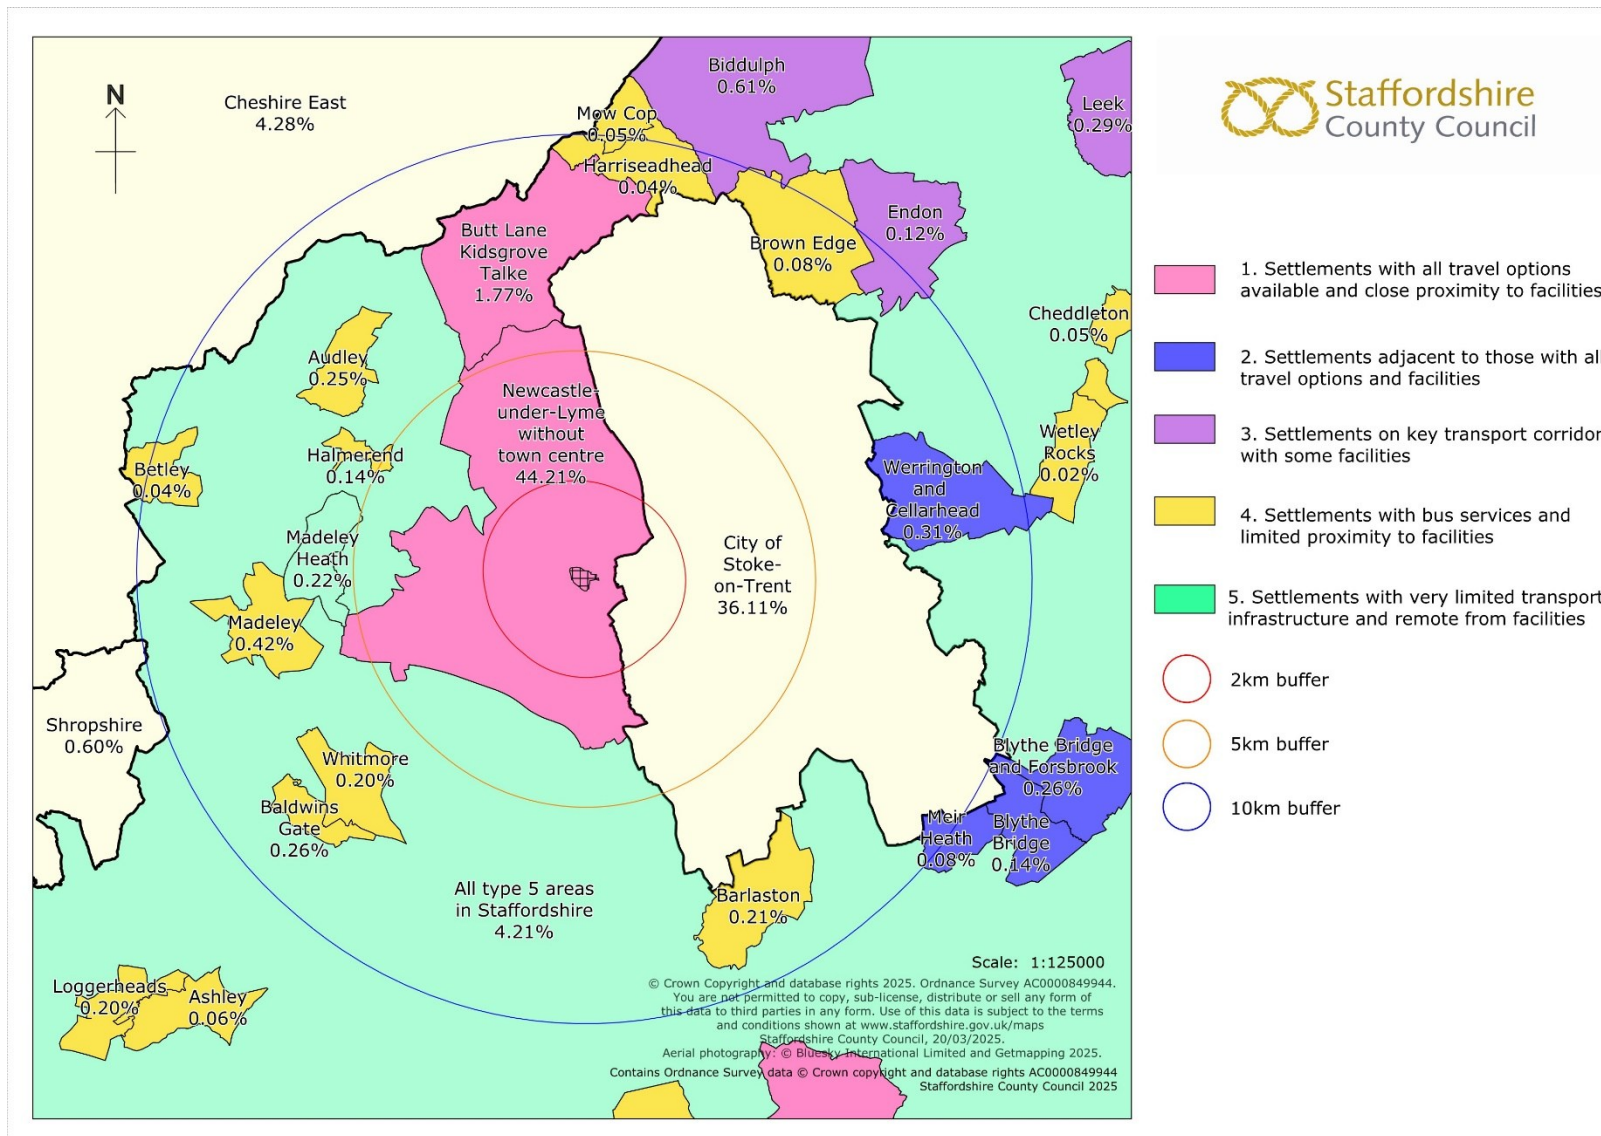

Figure 2: Trips for local areas to Newcastle-under-Lyme Town Centre

Figure 2 shows trips from the local area into Newcastle-under-Lyme town centre. It shows that 44.21% of trips start in the Newcastle-under-Lyme region. This is closely followed by 36.11% of journeys that originate in the City of Stoke-on-Trent. From figure 2 you will also be able to see how the type 2/3 and 4 settlements around Newcastle-under-Lyme attracts trips into the town centre.

In support of this, the top 10 origin points can be seen in figure 3. It shows that Newcastle-under-Lyme Town Centre attracts over 80% of trips originate from Newcastle-under-Lyme region and the City of Stoke-on-Trent combined. Figure 3 also shows that 4.28% of trips come from Cheshire East, showing how Newcastle-under-Lyme attracts trips from outside the county.

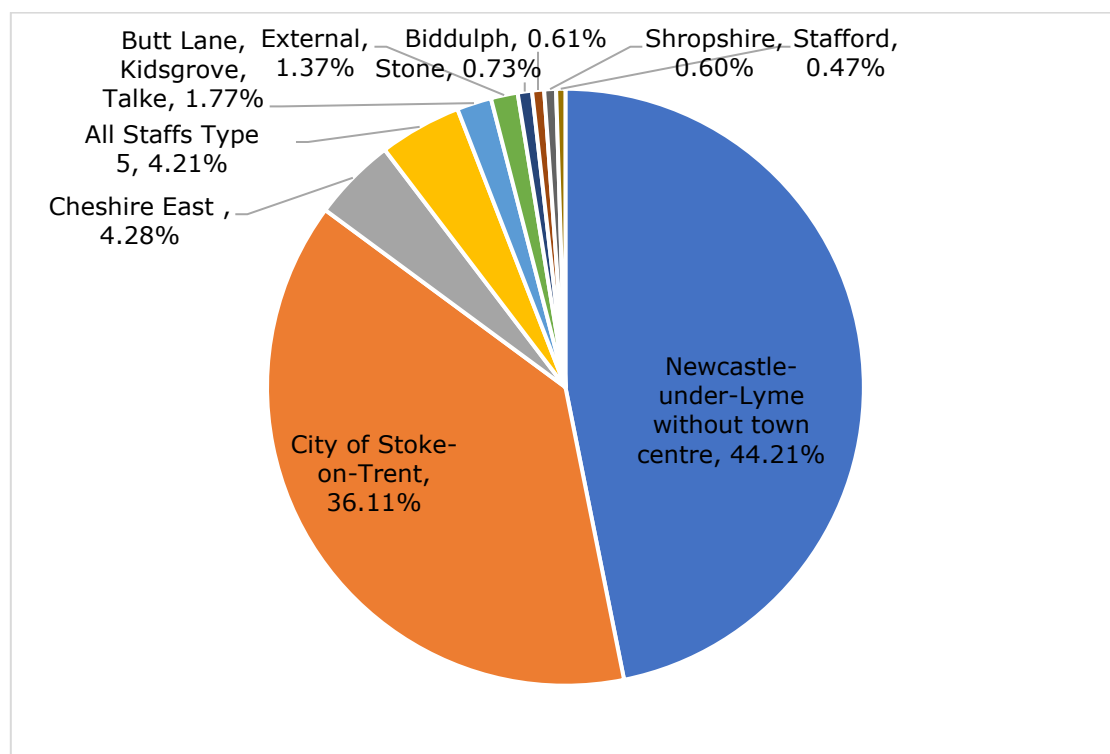

Figure 3: Top 10 origin regions to Newcastle-under-Lyme

On a wider scale, figure 4 shows trips from Staffordshire type 1 settlements along with neighbouring counties. This shows how there is little attraction to Newcastle-under-Lyme Town Centre from the type 1 settlements in the south of Staffordshire.

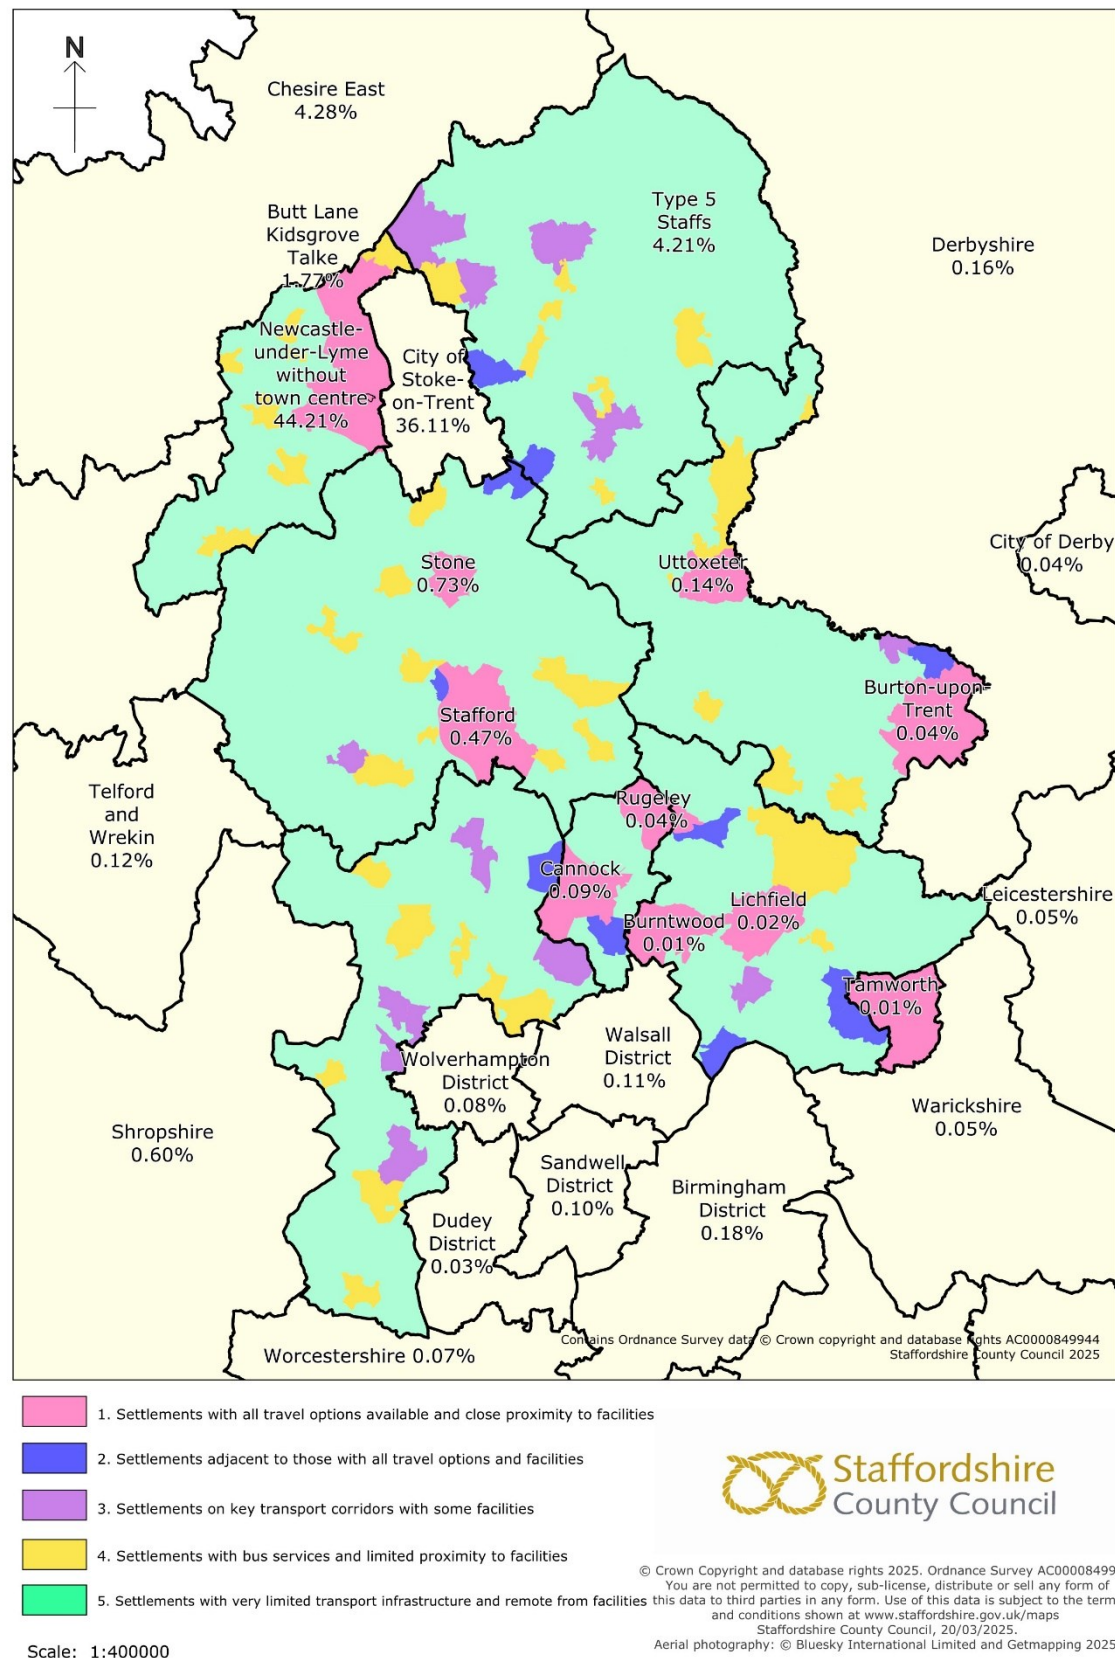

Figure 4: Wider county trips to Newcastle-under-Lyme Town Centre

TomTom data: Rugeley Town Centre

TomTom analysis has been conducted to determine where vehicular journeys start and end. Using the CAST settlements (Capability to achieve suitable transport) we can analyse where journeys from one CAST area (or wider county) end their trip. These settlements are used as origin points and the town centre areas used as destination points. For this analysis Rugeley Town Centre has been defined in the figure 1 below. The area that is included as the traditional town centre covers approximately 0.12km². Attraction spots in Rugeley town centre include Morrisons Supermarket, restaurants and pubs, various sizes of shops including Argos and Home Bargains.

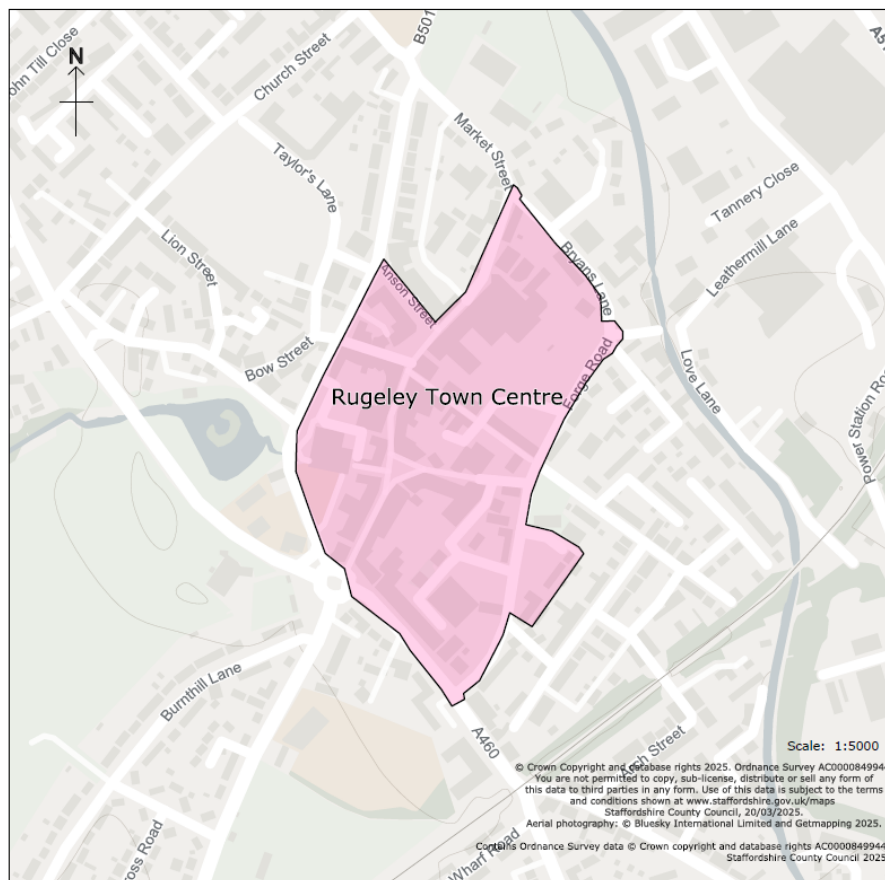

Figure 1: Rugeley Town Centre

In total 25,531 vehicular trips on Saturdays in 2024 where Rugeley town centre was the destination were recorded. These trips covered a 24-hour period. This equates to an average of 490 trips every Saturday. As TomTom is only an approximate sample of 10% of all trips on the network. It can be estimated that there are 255,310 vehicular trips that end in Rugeley Town Centre each Saturday, per year. The most common start hour for trips was between 11am-Midday, with the most common length being trips between 1-2km and the most common duration of trips being 5-10minutes.

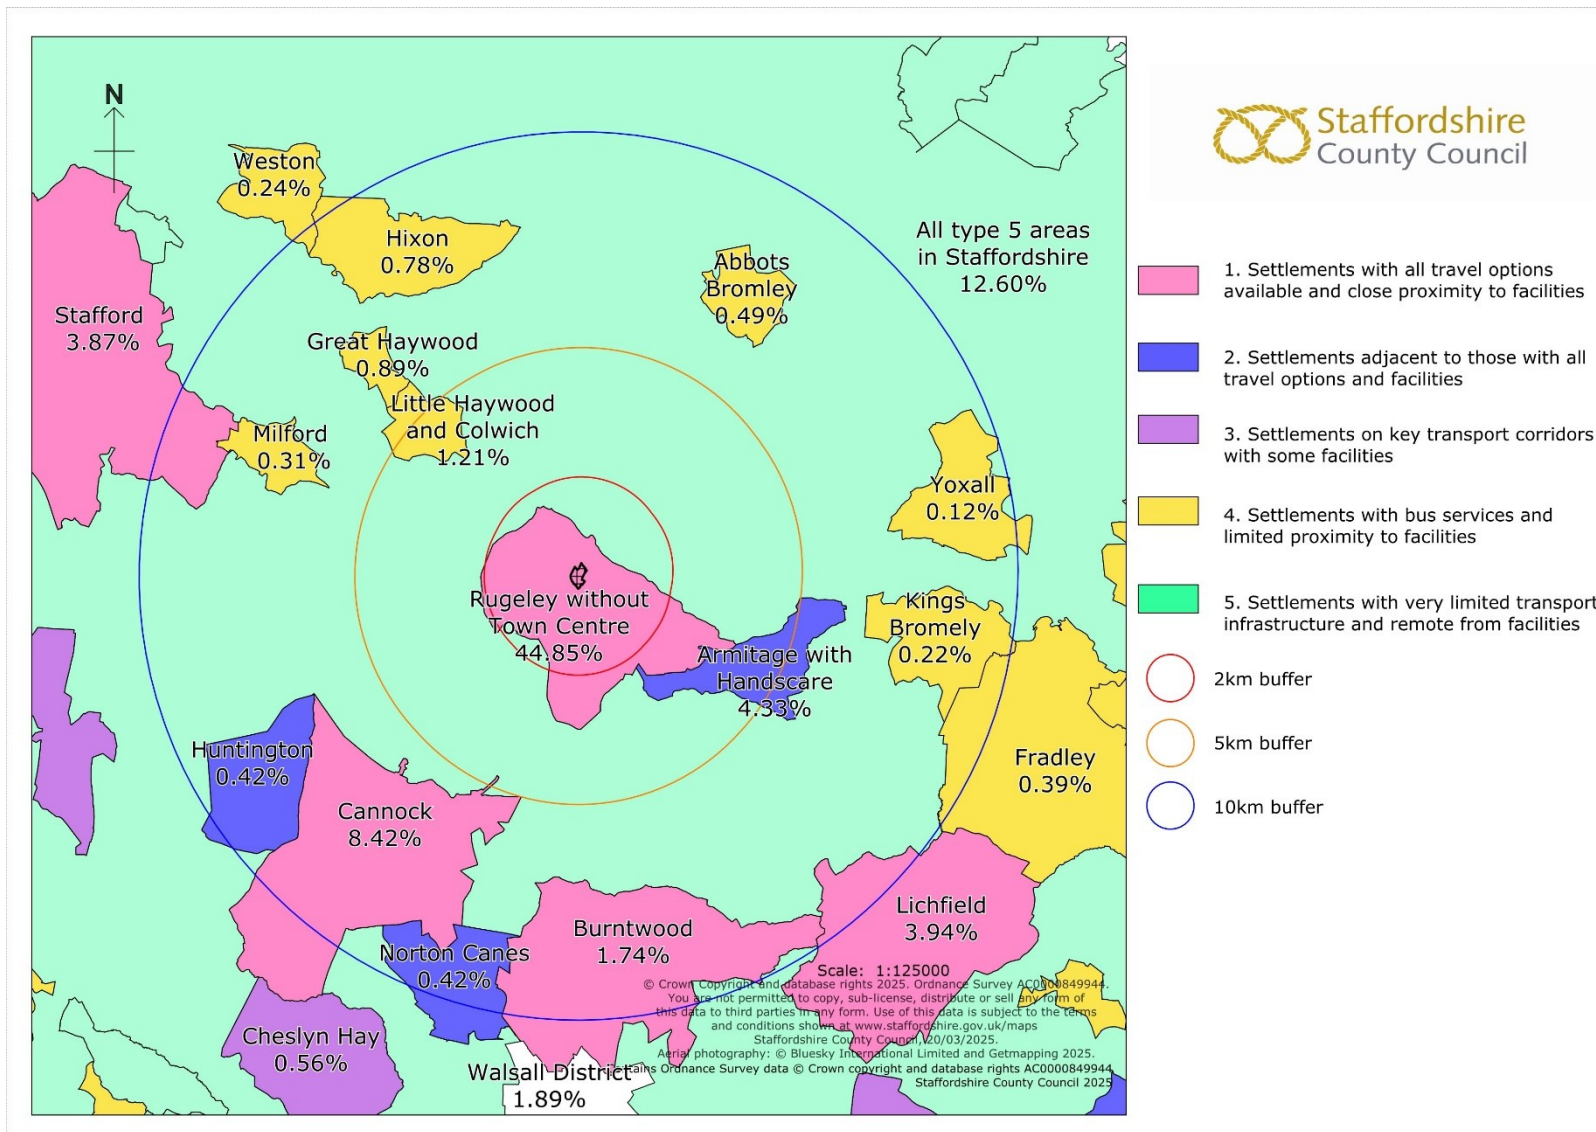

Figure 2: Trips from local areas to Rugeley Town Centre

Figure 2 shows trips from the local area to Rugeley Town Centre. It shows that 44.58% of all trips into Rugeley Town Centre on a Saturday start within the Rugeley region. After this 12.6% of trips come from the Staffordshire type 5 settlements, this will include hamlets and villages which have very limited transport infrastructure and are remote from facilities. Cannock then sits at 8.42% of trips.

In support to this, the top 10 origin points can be seen in figure 3. It is interesting to note the feature of Birmingham and Walsall Districts. This suggests that due to the location of Rugeley it is attracting trips outside of Staffordshire.

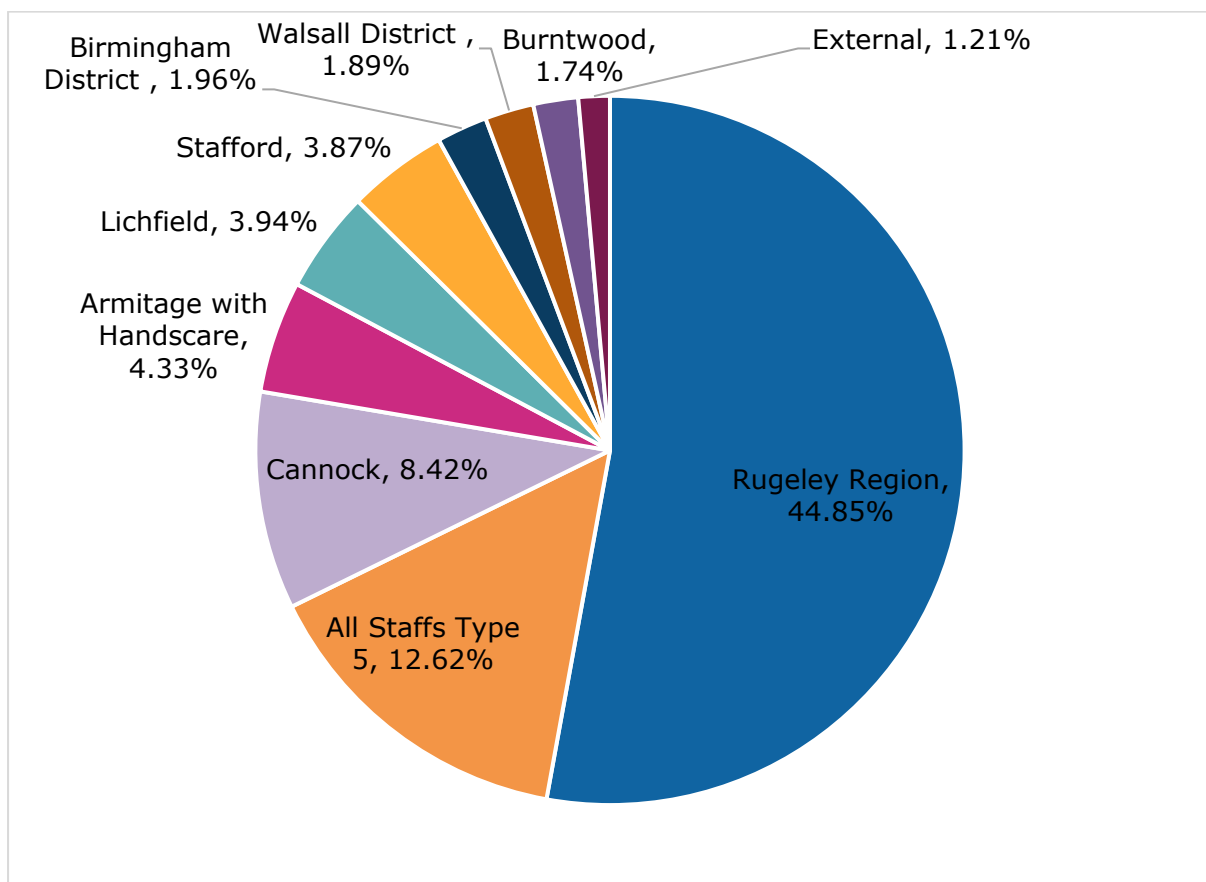

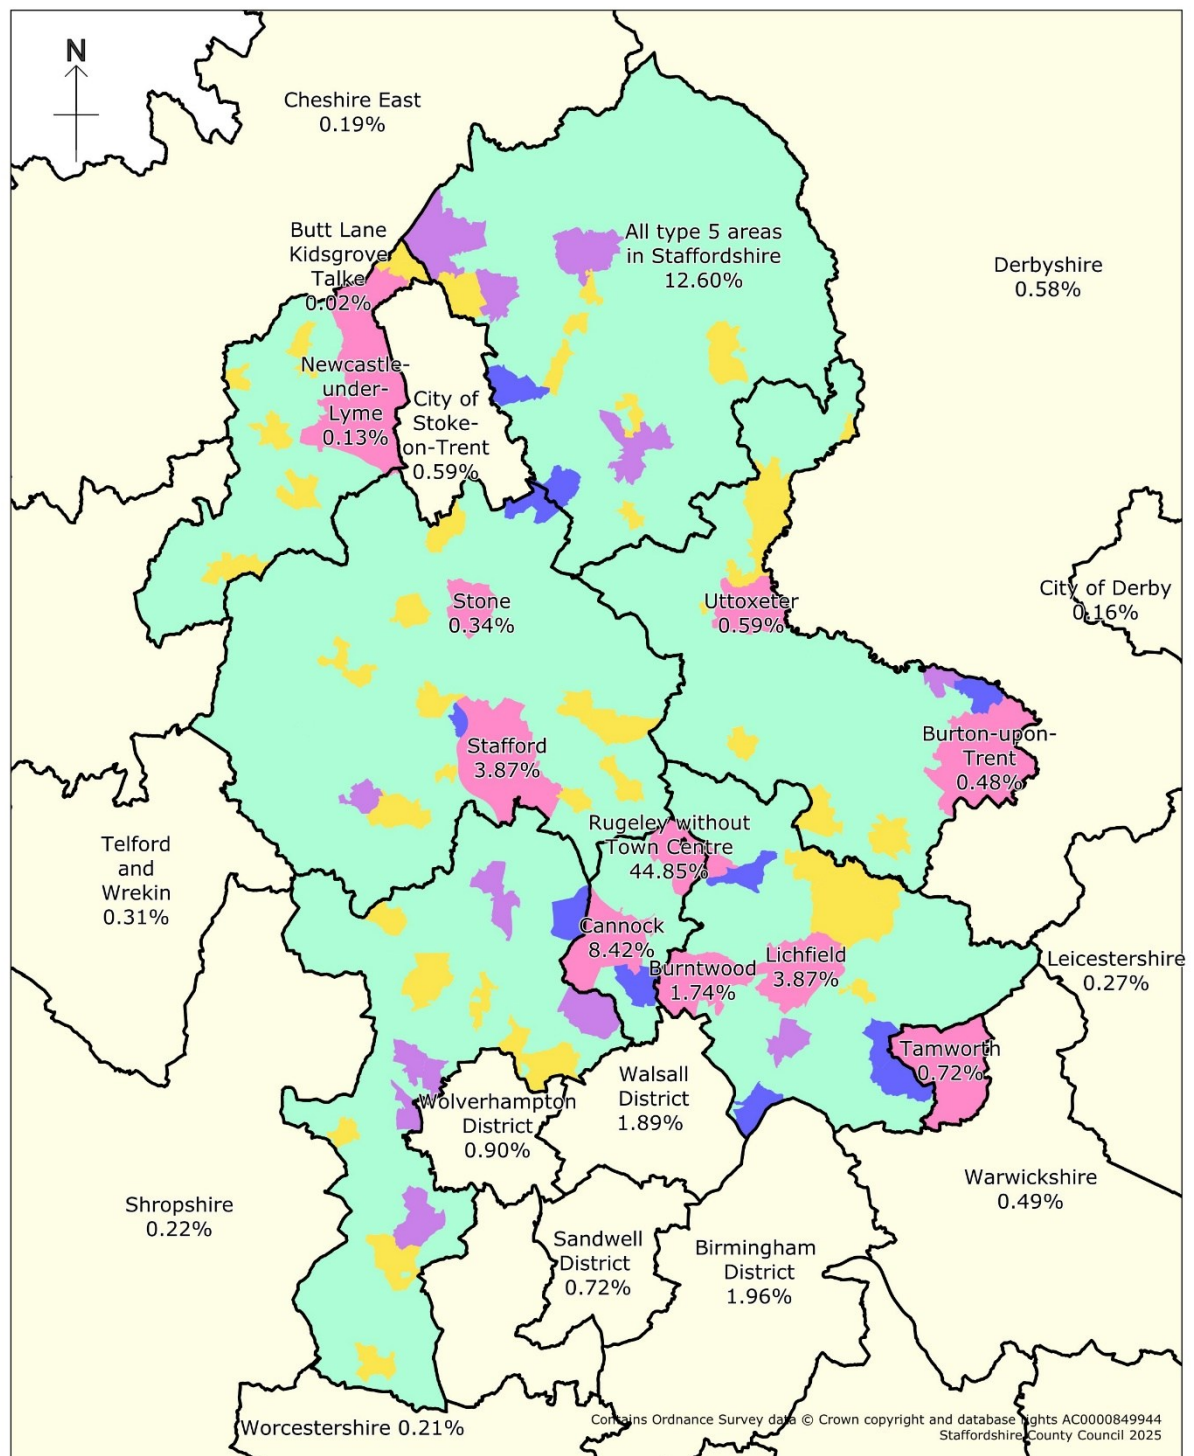

Figure 3: Top 10 origin regions to Rugeley Town Centre

On a wider scale, figure 4 shows trips from Staffordshire type 1 settlements along with neighbouring counties. This shows how many of the trips into Rugeley originate in Staffordshire itself rather than external counties.

- 1. Settlements with all travel options available and close proximity to facilities
- 2. Settlements adjacent to those with all travel options and facilities
- 3. Settlements on key transport corridors with some facilities
- 4. Settlements with bus services and limited proximity to facilities
- 5. Settlements with very limited transport infrastructure and remote from facilities

Scale: 1:400000

Figure 4: Wider county trips to Rugeley Town Centre

TomTom data: Stafford Town Centre

TomTom analysis has been conducted to determine where vehicular journeys start and end. Using the CAST settlements (Capability to achieve suitable transport) we can analyse where journeys from one CAST area (or wider county) end their trip. These settlements are used as origin points and the town centre areas used as destination points. For this analysis Stafford Town Centre has been defined in the figure 1 below. The area that is included as the traditional town centre covers approximately 0.71km². Trip attractors in Stafford Town Centre include the Riverside retail park which include shops such as M&S and Primark, various bars, nightclubs and restaurants. As well as a bowling alley and cinema. Included on the periphery of the town centre, Tesco, Sainsbury's and ASDA supermarkets also attract trips.

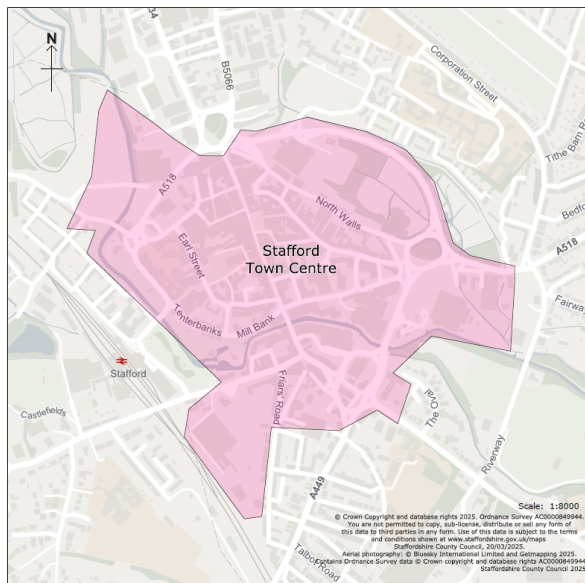

Figure 1: Stafford Town Centre

In total 191,200 vehicular trips on Saturdays in 2024 where Stafford town centre was the destination were recorded. These trips covered a 24-hour period. This equates to an average of 3,677 trips every Saturday. As TomTom is only an approximate sample of 10% of all trips on the network. It can be estimated that there are 1,912,000 vehicular trips that end in Stafford Town Centre on Saturdays, in a year. The most common start hour for trips was between 11am-Midday, with the most common length being trips between 2-3km and the most common duration of trips being 5-10minutes.

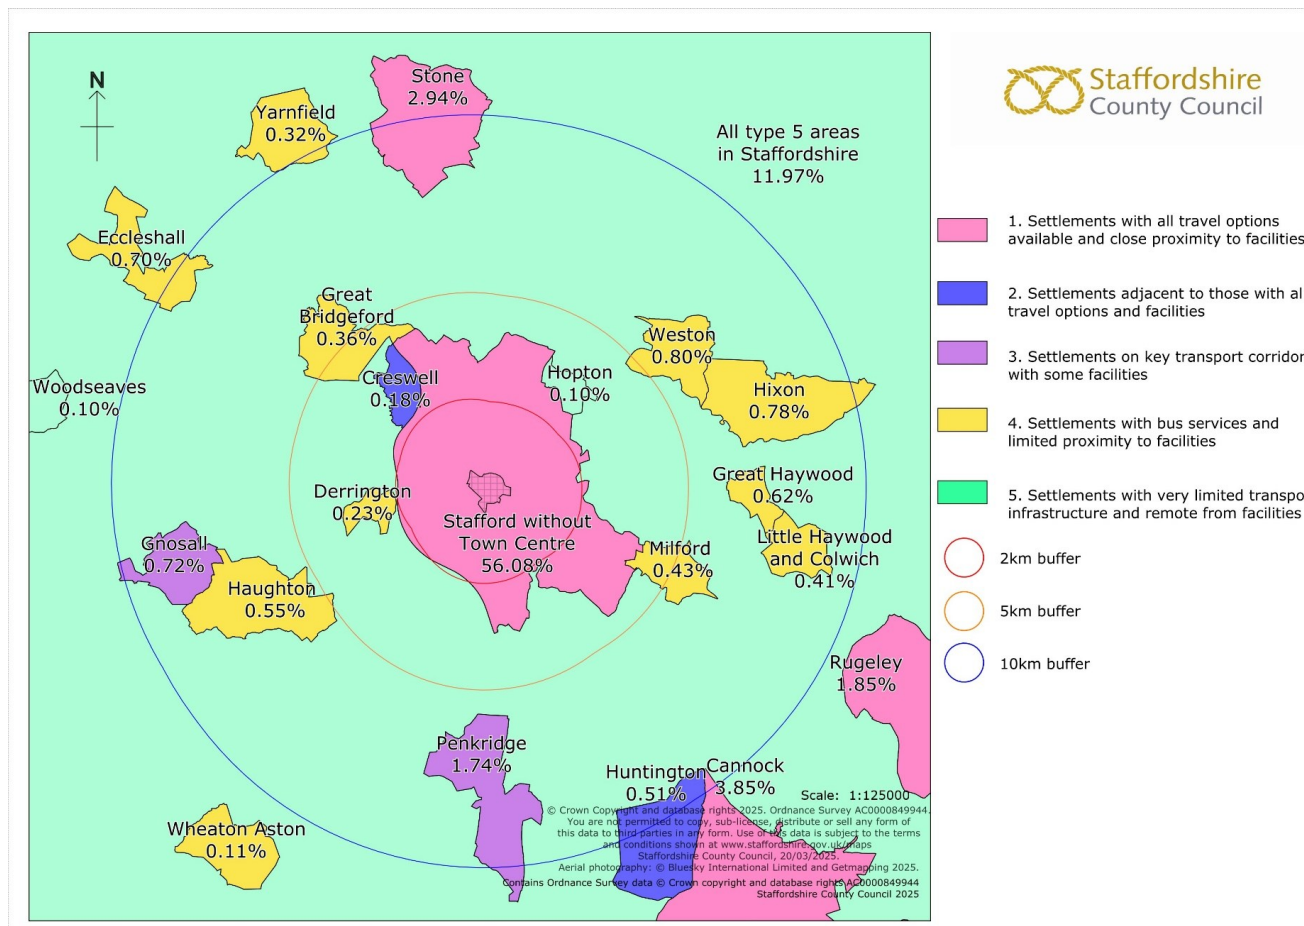

Figure 2: Trips from local areas to Stafford Town Centre

Figure 2 shows trips from the local area to Stafford Town Centre. It shows that 56.08% of all trips into Stafford Town Centre on a Saturday start within the Stafford region. After this 11.97% of trips come from the Staffordshire type 5 settlements, this will include hamlets and villages which have very limited transport infrastructure and are remote from facilities. Following this there are then 3.85% of trips starting from Cannock.

In support to this, the top 10 origin points can be seen in figure 3. It shows over half the number of trips into the Stafford Town Centre region are from the region of Stafford itself. This could be due to the attractors mentioned above.

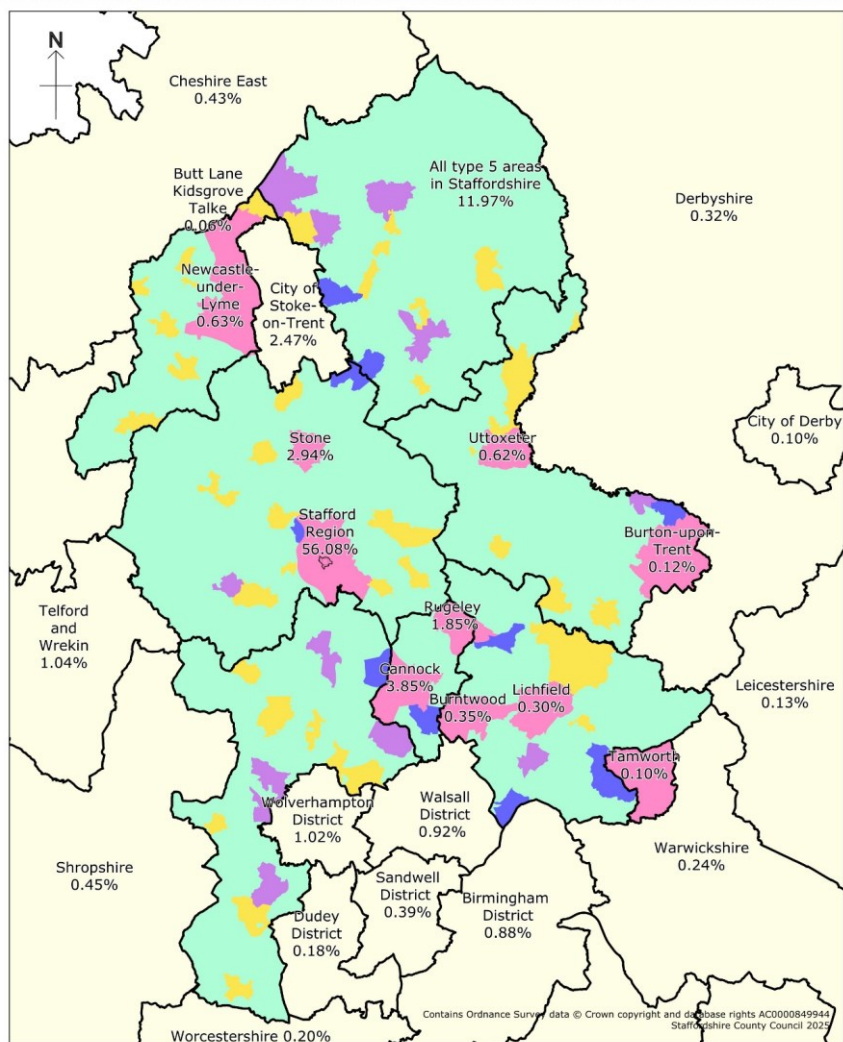

Figure 3: Top 10 origin regions to Stafford Town Centre

On a wider scale, figure 4 shows trips from Staffordshire type 1 settlements along with neighbouring counties.

Commented [JJ1]: Is it easy to say what % comes from within the 5km and 10km buffers, or is that a further TomTom run?

Commented [PI2R1]: Hi Jon. I think this would be a further run on TomTom

1. Settlements with all travel options available and close proximity to facilities
2. Settlements adjacent to those with all travel options and facilities
3. Settlements on key transport corridors with some facilities
4. Settlements with bus services and limited proximity to facilities
5. Settlements with very limited transport infrastructure and remote from facilities

Figure 4: Wider county trips to Stafford Town Centre

TomTom Data: Stone Town Centre

TomTom analysis has been conducted to determine where vehicular journeys start and end. Using the CAST settlements (Capability to achieve suitable transport) we can analyse where journeys from one CAST area (or wider county) end their trip. These settlements are used as origin points and the town centre areas used as destination points. For this analysis Stone Town Centre has been defined in figure 1 below. The area that is included as the traditional town centre covers approximately 0.08km². Trip attractors to Stone Town Centre include a high street which has various shops, restaurants and bars.

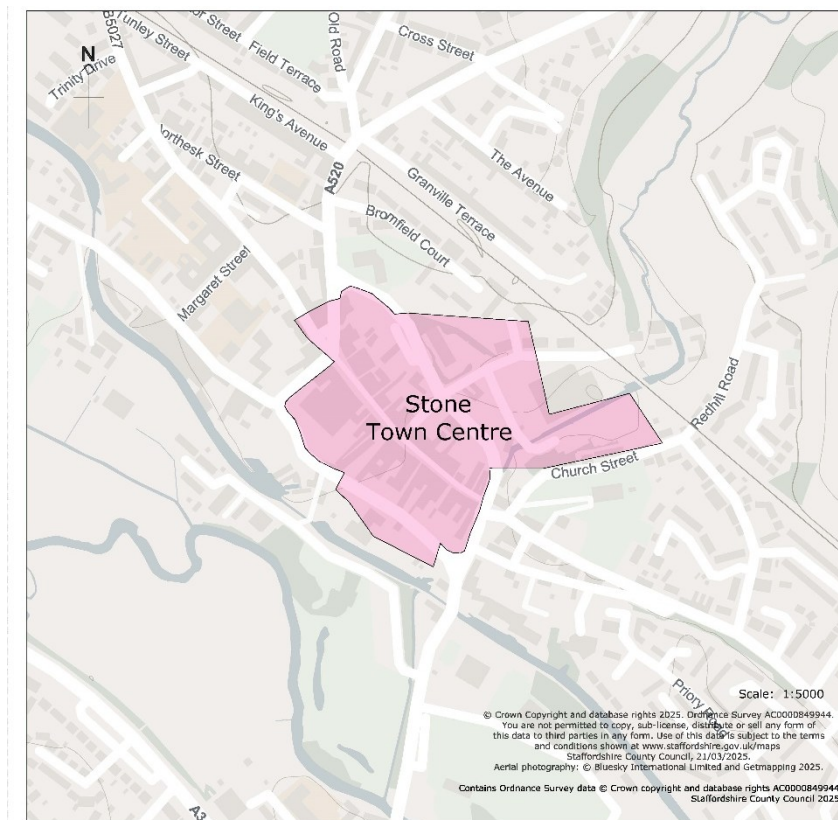

Figure 1: Stone Town Centre

In total 25,570 vehicular trips on Saturdays in 2024 where Stone Town Centre was the destination were recorded. These trips covered a 24-hour period. This equates to 491 trips every Saturday. As TomTom is only an approximate sample of 10% of all trips on the network; it can be estimated that there are 255,700 vehicular trips that end in Stone Town Centre on Saturdays annually. The most common start hour for trips is 11-12pm, with the most common length being trips between 1-2km and the most common duration of trips being 5-10 minutes.

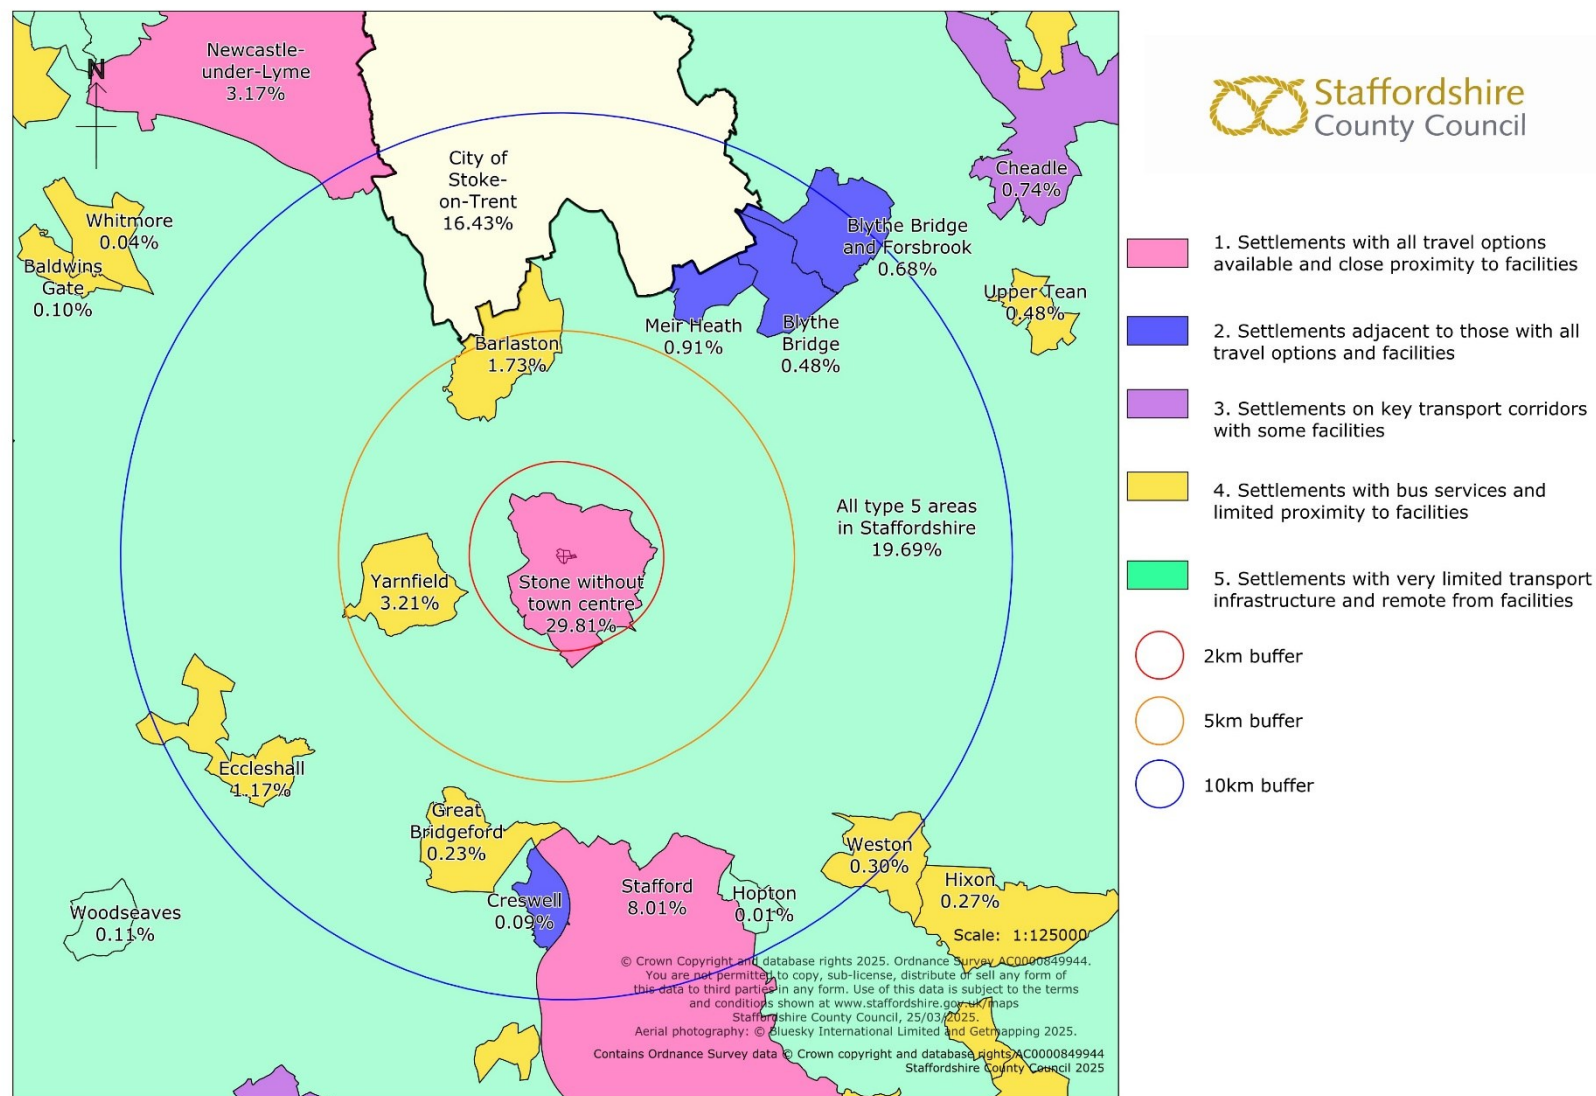

Figure 2: Local trips to Stone Town Centre

Figure 2 shows trips from the local area into Stone Town Centre. It shows that one third of the trips originate from the Stone region. The location of Stone means it attracts 16.43% of trips from the City of Stoke-on-Trent, in the North and 8.01% of trips from Stafford in the South.

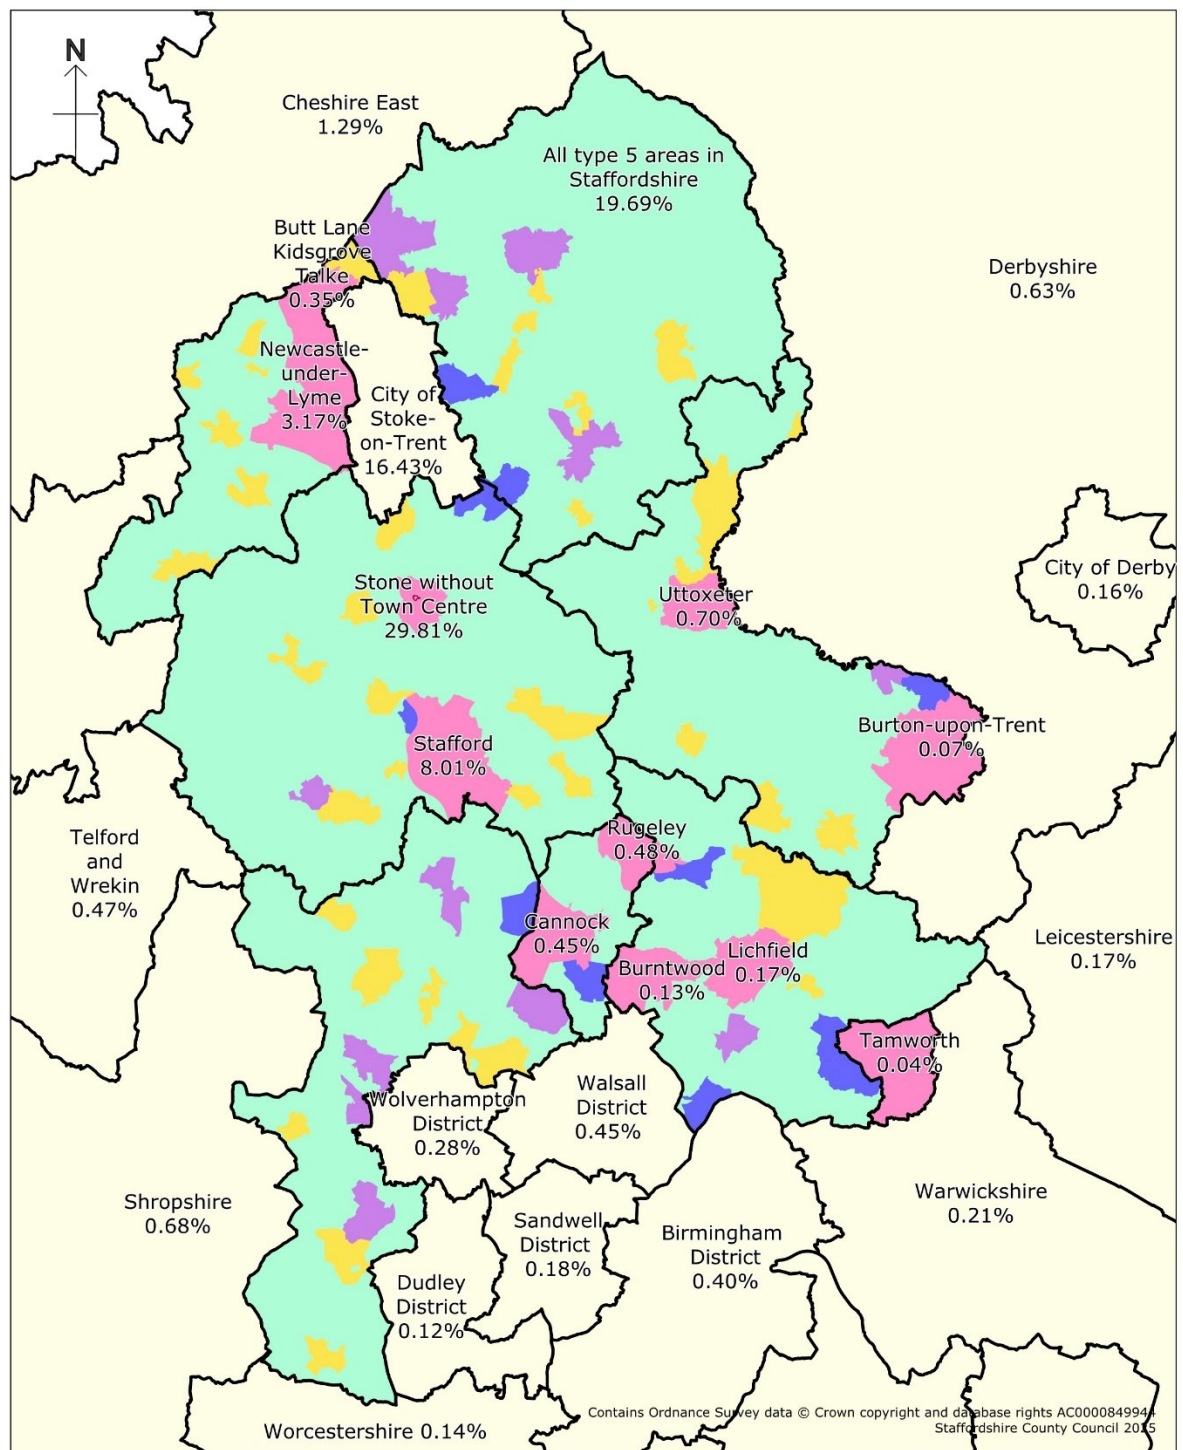

Figure 3: Top 10 origin points for trips into Stone Town Centre

In support of this, the top 10 origin points can be seen in figure 3. This shows how one fifth of all trips into the town centre of Stone originate in the wider type 5 settlement areas. This will be due to the centrality of Stone Town Centre within the county of Staffordshire. Other Type 4 settlements such as Yarnfield, Barlaston and Eccleshall also feature in the top 10 which shows reliance on the Stone from the smaller surrounding settlements.

On a wider scale, figure 4 shows trips from Staffordshire's type 1 settlements along with neighbouring counties. This wider plan does show that apart from Newcastle-under-Lyme and Stafford, Stone does not draw a very large attraction from other type 1 settlements.

- 1. Settlements with all travel options available and close proximity to facilities
- 2. Settlements adjacent to those with all travel options and facilities
- 3. Settlements on key transport corridors with some facilities
- 4. Settlements with bus services and limited proximity to facilities
- 5. Settlements with very limited transport infrastructure and remote from facilities

Figure 4: Wider county trips to Stone Town Centre

TomTom Data: Tamworth Town Centre

TomTom analysis has been conducted to determine where vehicular journeys start and end. Using the CAST settlements (Capability to achieve suitable transport) we can analyse where journeys from one CAST area (or wider county) end their trip. These settlements are used as origin points and the town centre areas used as destination points. For this analysis Tamworth Town Centre has been defined in figure 1 below. The area that is included as the traditional town centre covers approximately 0.26km². Trip attractors to the town centre include the Ankerside shopping centre and other shops along the highstreets. Tamworth also has several restaurants, pubs and bars along with a couple of nightclubs that attract visitors in the evening time as well as the cinema. There is also a possibility that the town centre is visited by those visiting the Castle, Snowdome and Ventura Retail Park that all fall outside of the town centre boundary shown in figure 1.

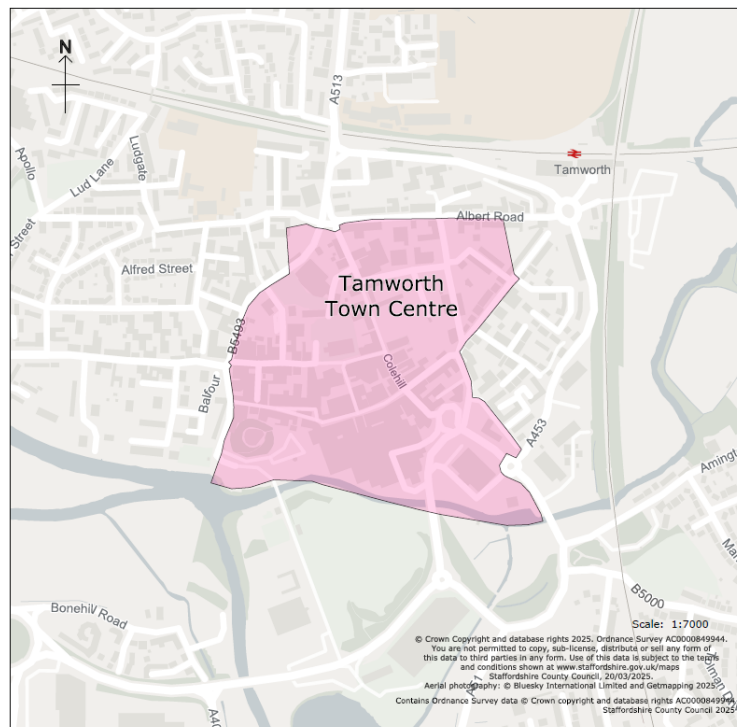

Figure 1: Tamworth town centre boundary

In total 75,080 vehicular trips on Saturdays in 2024 where Tamworth Town Centre was the destination were recorded. These trips covered a 24-hour period. This equates to 1,443 trips every Saturday. As TomTom is only an approximate sample of 10% of all trips on the network; it can be estimated that there are 750,800 vehicular trips that end in Tamworth Town Centre each Saturday a year. The most common start hour for trips is 12-13pm, with the most common length being trips between 2-3km and the most common duration of trips being 5-10 minutes.

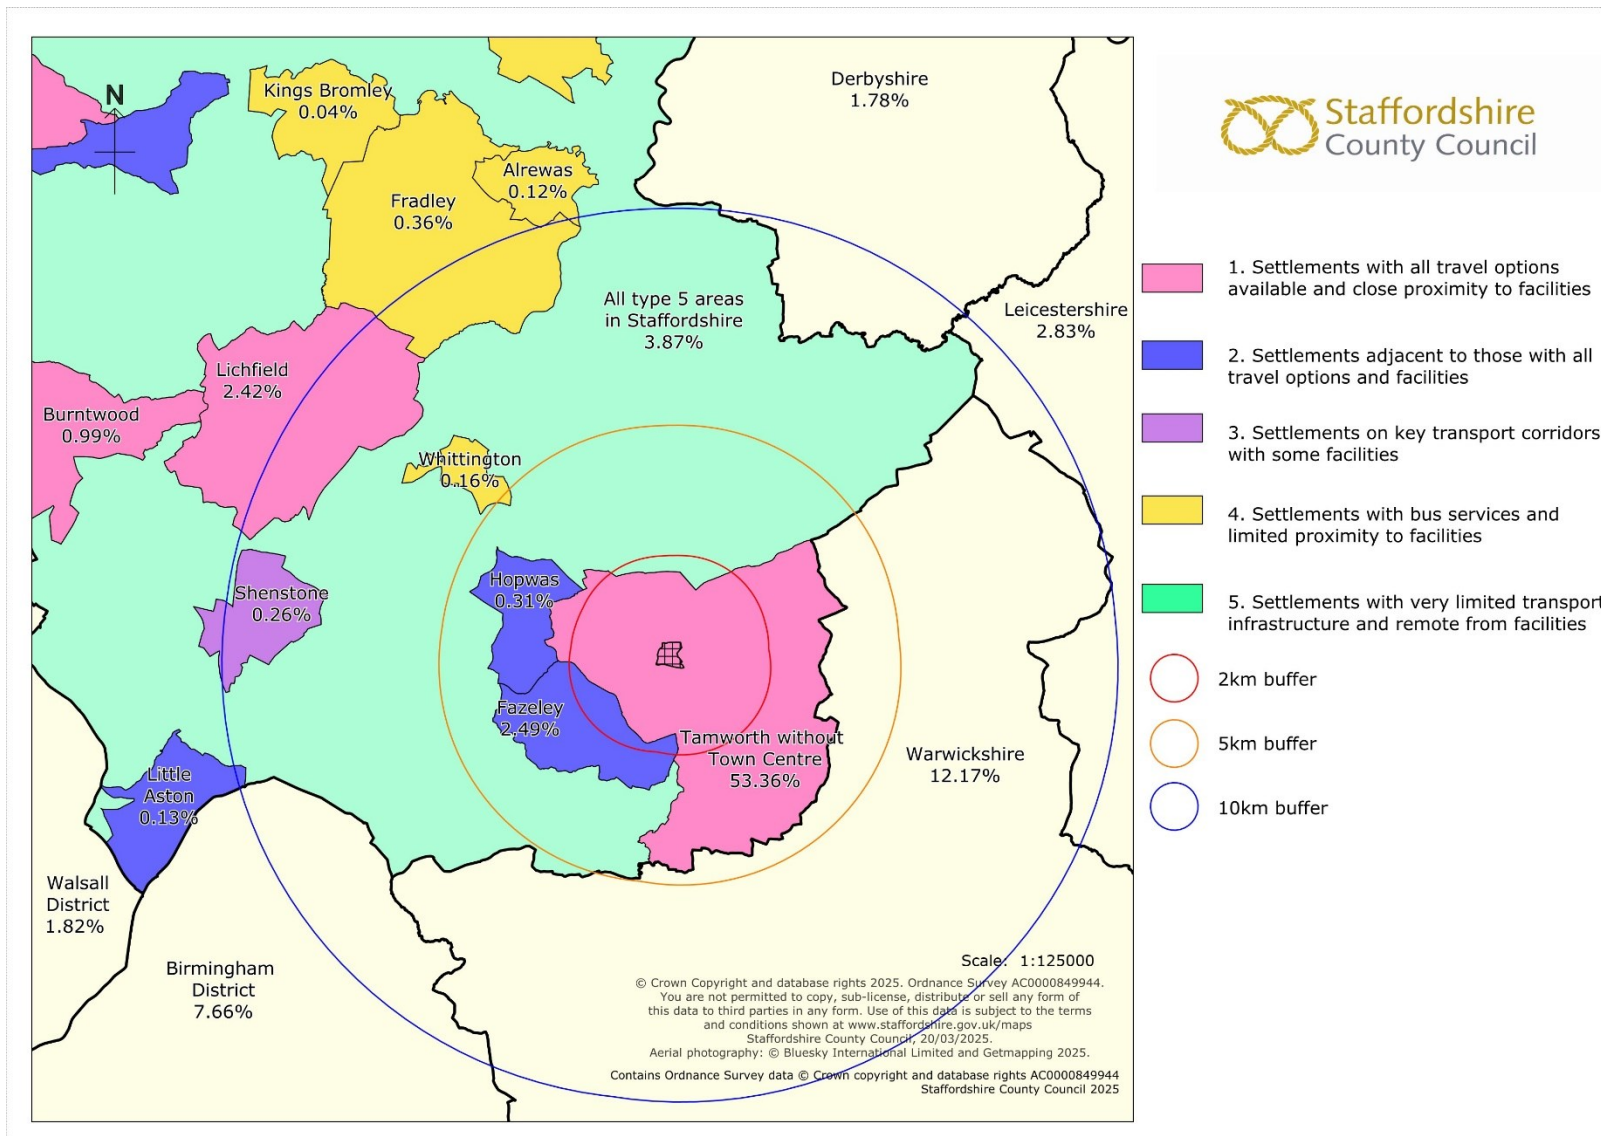

Figure 2: Local trips to Tamworth Town Centre

Figure 2 shows trips from the local area into Tamworth Town Centre on a Saturday. The main observation from map is that the region of Tamworth (without the town centre) attracts over 56% of all trips into the town centre. This could be from a combination of residents of this area, as well as vehicular trips from Ventruea retail park or the Snowdome into the town centre. It shows that Tamworth Town Centre attracts a number of trips from outside the county. Warwickshire, Walsall, Birmingham, Leicestershire and Derbyshire total over one quarter of trips into the town centre on Saturdays.

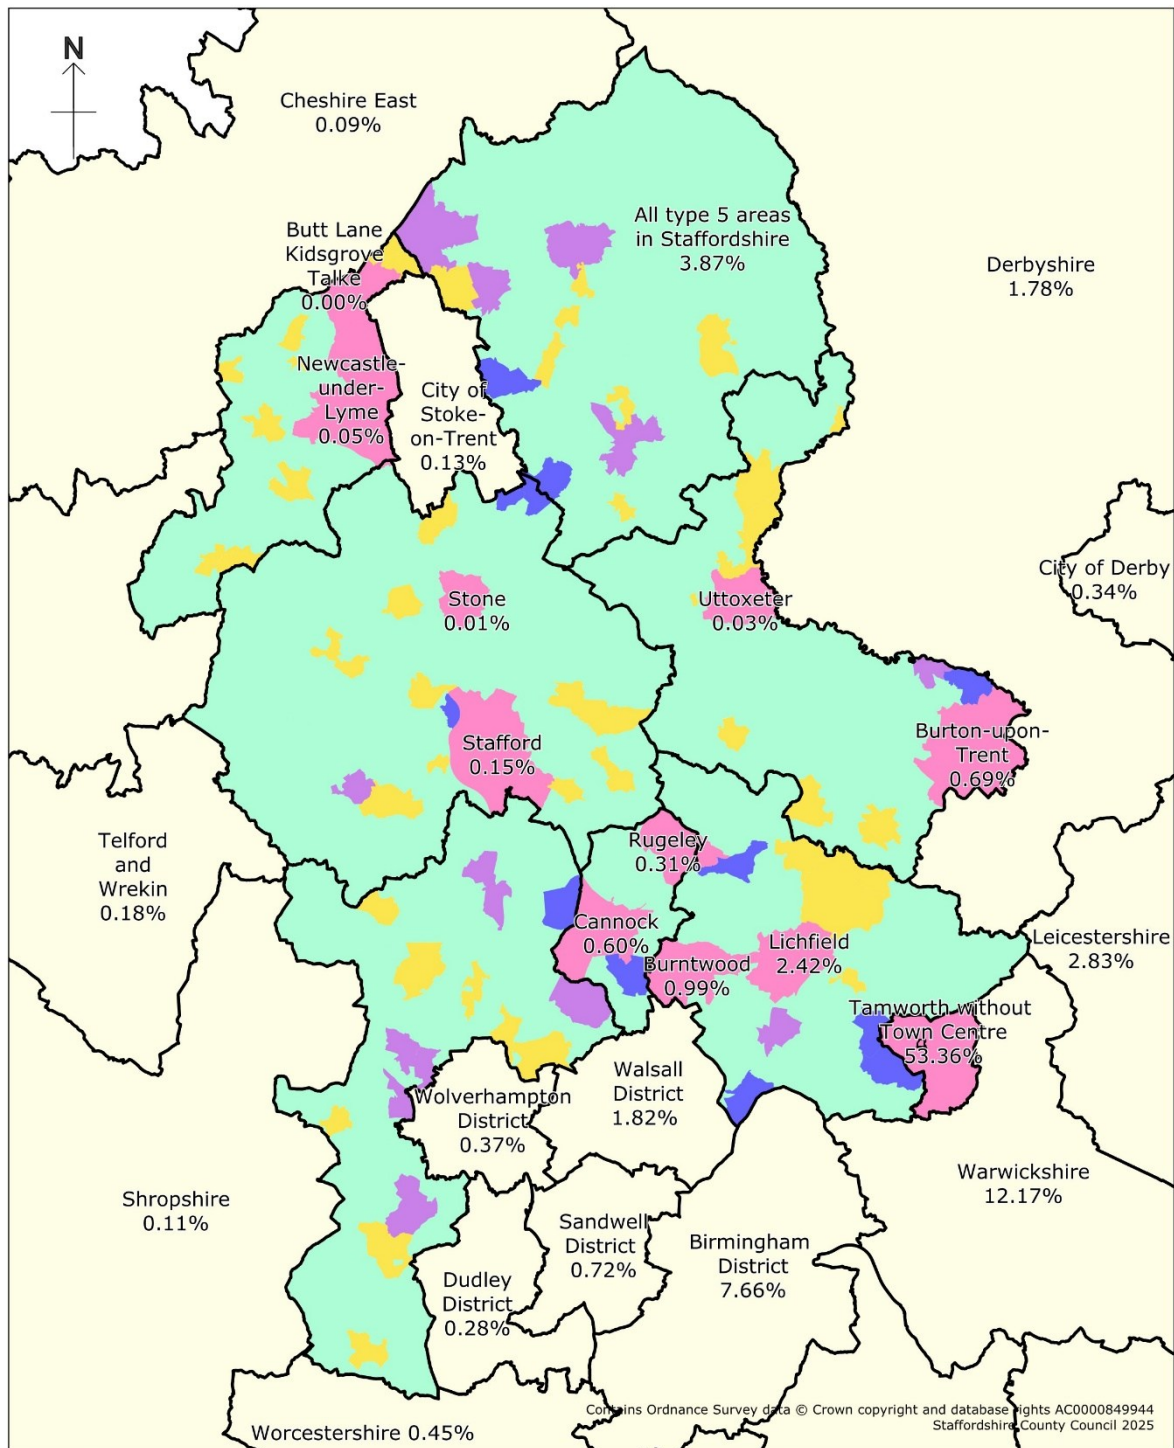

Figure 3: Top 10 origin regions to Tamworth Town Centre

In support of what can be seen in figure 2, figure 3 shows the top 10 origin settlements that trips to Tamworth Town Centre originate from. Figure 3 highlights how Tamworth Town Centre attracts trips largely just from other Type 1 settlements or counties around Staffordshire.

On a wider scale figure 4 shows trips into Tamworth Town Centre on a countywide view as well as showing trips from the neighbouring counties.

- 1. Settlements with all travel options available and close proximity to facilities
- 2. Settlements adjacent to those with all travel options and facilities
- 3. Settlements on key transport corridors with some facilities
- 4. Settlements with bus services and limited proximity to facilities
- 5. Settlements with very limited transport infrastructure and remote from facilities

Figure 4: Wider county trips to Tamworth Town Centre

TomTom Data: Uttoxeter Town Centre

TomTom analysis has been conducted to determine where vehicular journeys start and end. Using the CAST settlements (Capability to achieve suitable transport) we can analyse where journeys from one CAST area (or wider county) end their trip. These settlements are used as origin points and the town centre areas used as destination points. For this analysis Uttoxeter Town Centre has been defined in figure 1 below. The area that is included as the traditional town centre covers approximately 0.10km². Trip attractors to the town centre include a town centre includes shops in the centre as well as ASDA supermarket. There are also numerous bars, pubs and restaurants.

Figure 1: Uttoxeter Town Centre

In total 18,750 vehicular trips on Saturdays in 2024 where Uttoxeter Town Centre was the destination were recorded. These trips covered a 24-hour period. This equates to 360 trips every Saturday. As TomTom is only an approximate sample of 10% of all trips on the network; it can be estimated that there are 187,500 vehicular trips that end in Uttoxeter Town Centre on all Saturdays a year. The most common start hour for trips is 11-12pm, with the most common length being trips between 1-2km and the most common duration of trips being 5-10 minutes.

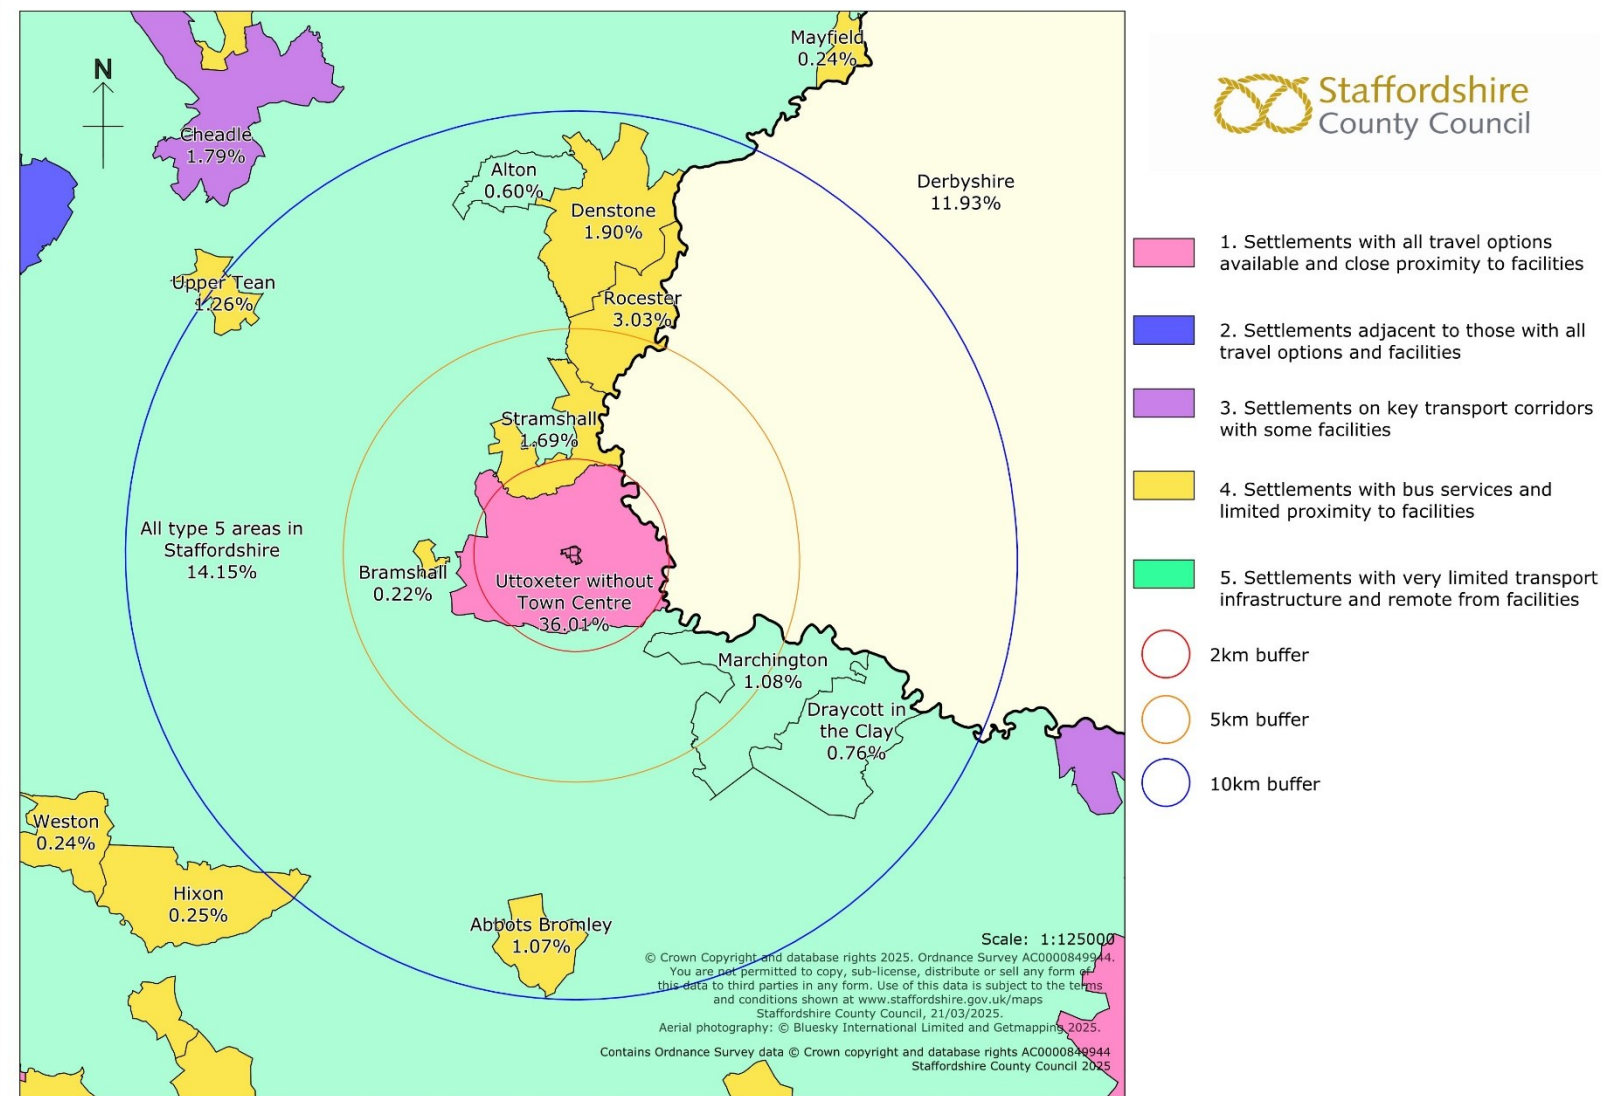

Figure 2: Local trips to Uttoxeter Town Centre

Figure 2 shows trips from the local area into Uttoxeter Town Centre on a Saturday. It shows that 36% of trips into the town centre come from Uttoxeter region, this will be locals visiting the town centre for its amenities. Figure 2 also shows the attraction from type 4 and 5 settlements in the area. Such as Rocester which attracts 3.03% of trips and Marchington in which 1.08% of trips originate from.

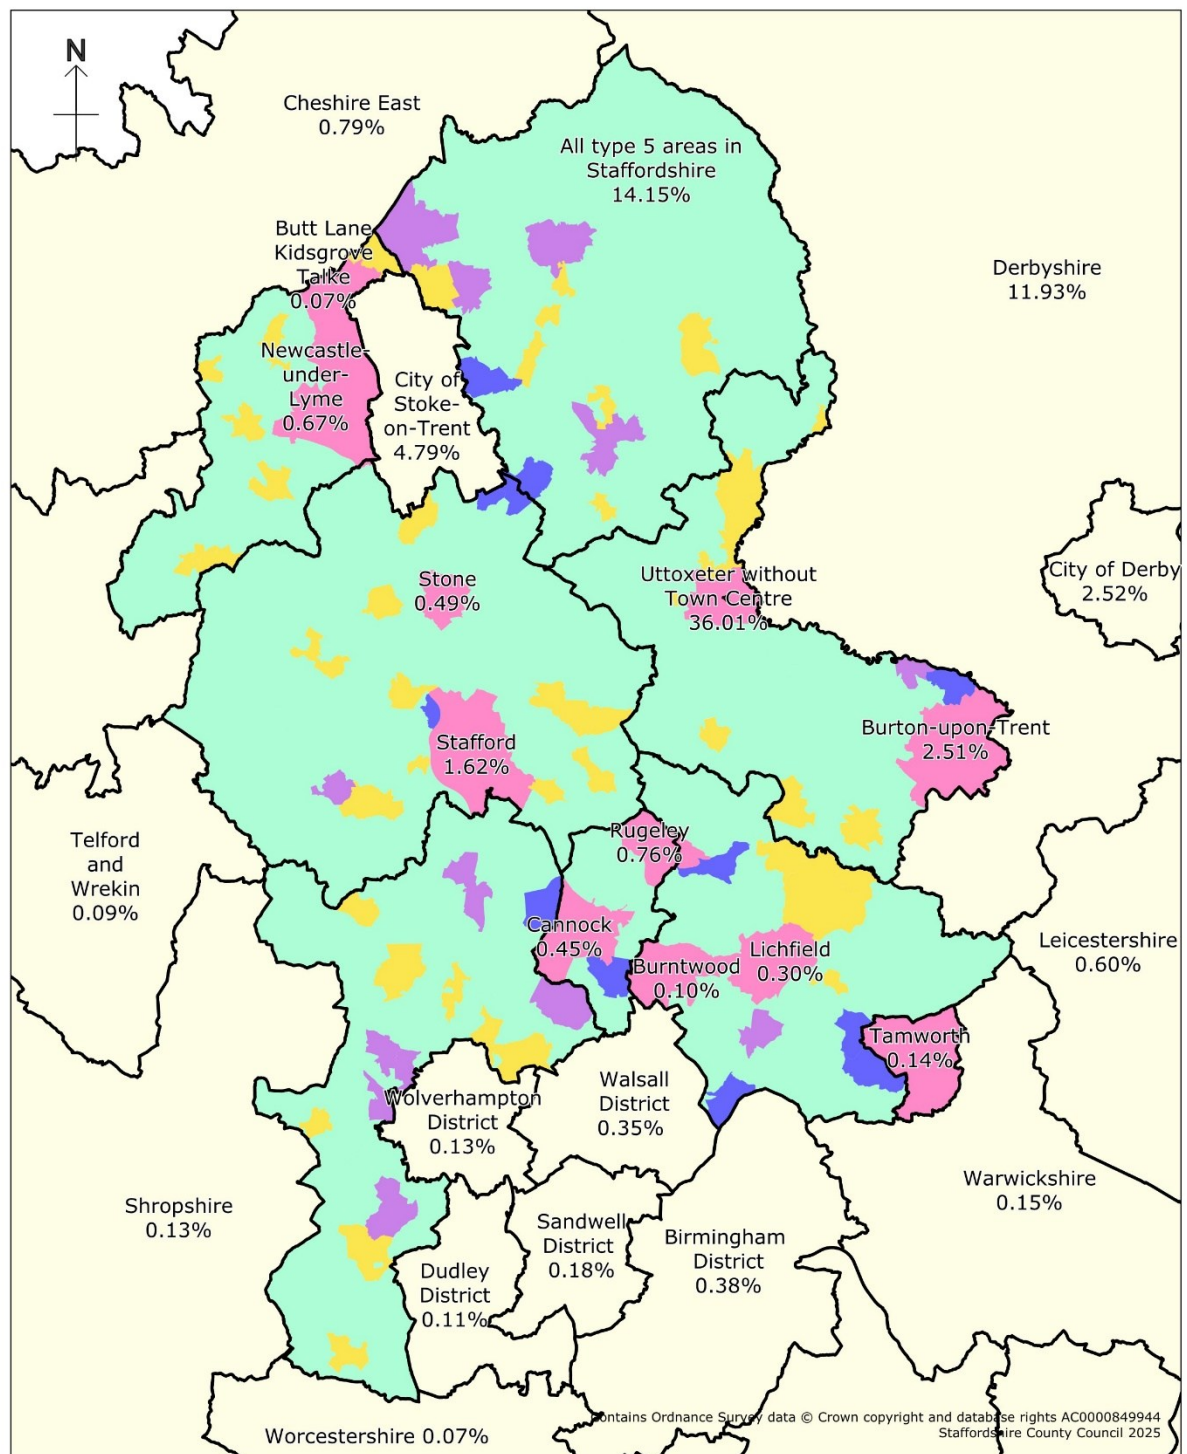

Figure 3: Top 10 origin regions to Uttoxeter Town Centre

In support of what can be seen in figure 2, figure 3 shows the top 10 origin settlements that trips to Uttoxeter Town centre originate from. Figure 3 highlights that Uttoxeter Town centre has a 14.15% pull from all of the Type 5 areas without defined settlements (this is shown by the green area in figure 4). Figure 3 also shows that due to the location of Uttoxeter, 11.93% of trips originate from the county of Derbyshire, with a further 2.52% of trips originating from the City of Derby. The 2.72% of external trips cover all other UK areas not identified in figure 4.

On a wider scale figure 4 shows trips from Staffordshire's type 1 settlement along with neighbouring counties. This map highlights the pull from the East, with locations such as the City of Stoke-on-Trent, Derbyshire and the other type 5 areas in Staffordshire making up most of the trips.

- 1. Settlements with all travel options available and close proximity to facilities
- 2. Settlements adjacent to those with all travel options and facilities
- 3. Settlements on key transport corridors with some facilities
- 4. Settlements with bus services and limited proximity to facilities
- 5. Settlements with very limited transport infrastructure and remote from facilities
